Calculation of True Up TRR

A) Rate Base for True Up TRR

Line	Rate Base Item	Calculation Method	Notes	FERC Form 1 Reference or Instruction	Amount
1	ISO Transmission Plant	13-Month Avg.		6-PlantInService, Line 18	$8,388,534,793
2	General + Elec. Misc. Intangible Plant	BOY/EOY Avg.		6-PlantInService, Line 24	$251,932,546
3	Transmission Plant Held for Future Use	BOY/EOY Avg.		11-PHFU, Line 9	$9,942,155
4	Abandoned Plant	BOY/EOY Avg.		12-AbandonedPlant Line 4	$0
	Working Capital Amounts				
5	Materials and Supplies	13-Month Avg.		13-WorkCap, Line 17	$13,056,720
6	Prepayments	13-Month Avg.		13-WorkCap, Line 33	$10,646,786
7	Cash Working Capital	1/16 (O&M + A&G)		1-Base TRR Line 7	$7,811,148
8	Working Capital			Line 5 + Line 6 + Line 7	$31,514,654
	Accumulated Depreciation Reserve Amounts				
9	Transmission Depreciation Reserve - ISO	13-Month Avg.	Negative amount	8-AccDep, Line 14, Col. 12	-$1,549,803,158
10	Distribution Depreciation Reserve - ISO	BOY/EOY Avg.	Negative amount	8-AccDep, Line 17, Col. 5	$0
11	G + I Depreciation Reserve	BOY/EOY Avg.	Negative amount	8-AccDep, Line 23	-$102,808,033
12	Accumulated Depreciation Reserve			Line 9 + Line 10 + Line 11	-$1,652,611,191
13	Accumulated Deferred Income Taxes	BOY/EOY Avg.		9-ADIT, Line 15	-$1,600,478,189
14	CWIP Plant	13-Month Avg.		14-IncentivePlant, L 13, C2	$106,455,575
15	Network Upgrade Credits	BOY/EOY Avg.	Negative amount	22-NUCs, Line 9	-$106,562,330
15a	Unfunded Reserves			34-UnfundedReserves, Line 7	-$10,164,798
16	Other Regulatory Assets/Liabilities	BOY/EOY Avg.		23-RegAssets, Line 15	$0
17	Rate Base			L1+L2+L3+L4+L8+L12+ L13+L14+L15+L15a+L16	$5,418,563,214

B) Return on Capital

Line				
18	Cost of Capital Rate	See Instruction 1	Instruction 1, Line j	7.2500%
19	Return on Capital: Rate Base times Cost of Capital Rate		Line 17 * Line 18	$392,844,240

C) Income Taxes

20	Income Taxes = [((RB * ER) + D) * (CTR/(1 – CTR))] + CO/(1 – CTR)			$201,913,862
	Where:			
21	RB = Rate Base		Line 17	$5,418,563,214
22	ER = Equity ROR inc. Com. and Pref. Stock	Instruction 1	Instruction 1, Line k	5.2592%

Schedule 4
True Up TRR
(Revised 2017 True Up TRR)

-$173,950	FERC Audit Refund - AFUDC
-$392,245	Total Adjustment

Instructions:
1) Use weighted average (by time) of the Return on Equity in effect during the Prior Year in determining the "Cost of Capital Rate" on Line 18 and the "Equity Rate of Return Including Preferred Stock" on Line 22 in the event that the ROE is revised during the Prior Year. In this event, the ROE used in Schedule 1 will differ from the ROE used in this Schedule 4, because the Schedule 1 ROE will be the most recent ROE, whereas the Schedule 4 Cost of Capital Rate and Equity Rate of Return including Com. + Pref. Stock will be based on the weighted-average ROE.

Calculation of weighted average Cost of Capital Rate in Prior Year:
If ROE does not change during year, then attribute all days to Line a "ROE at end of Prior Year" and none to "ROE at start of PY"

		Percentage	Reference:	From	To	Days ROE In Effect
a	ROE at end of Prior Year	9.80%	1-Base TRR L 49	Jan 1, 2017	Dec 31, 2017	365
b	ROE start of Prior Year	9.80%	See Line e below			
c					Total days in year:	365
d	Wtd. Avg. ROE in Prior Year	9.80%	((Line a ROE * Line a days) + (Line b ROE * Line b days)) / Total Days in Year			

Commission Decisions approving ROE:

		Reference:
e	End of Prior Year	Settlement in ER11-3697
f	Beginning of Prior Year	Settlement in ER11-3697

		Percentage	Reference:
g	Wtd. Cost of Long Term Debt	1.9908%	1-Base TRR L 50
h	Wtd.Cost of Preferred Stock	0.4951%	1-Base TRR L 51
i	Wtd.Cost of Common Stock	4.7641%	1-Base TRR L 46 * Line d
j	Cost of Capital Rate	7.2500%	Sum of Lines f to h

Calculation of Equity Rate of Return Including Common and Preferred Stock:

		Percentage	Reference:
k		5.2592%	Sum of Lines g to h

2) Beginning with the True Up Adjustment calculation for 2012 utilizing the True Up TRR for 2012, exclude from CWIP recovery the capital cost of facilities that were purchased for the portion of Tehachapi Segment 8 near the Chino Airport, but due to the April 25, 2011 Notice of Presumed Hazard issued to SCE by the FAA are not used in the construction of Tehachapi or in any other CWIP incentive project. Additionally, SCE will permanently exclude from Plant In Service, Rate Base, and transmission rates these capital costs if the facilities are not used in the construction of any SCE transmission project.

Plant In Service

Inputs are shaded yellow

Notes:

1) Amounts on Line 13 from corresponding account Schedule 7, column 2.
Amounts on Line 1 must match corresponding account Schedule 7, Column 2 for previous year.
The amounts for each month on the remaining lines are calculated by summing the following values:
a) Other ISO Transmission Activity without Incentive Plant Activity on Lines 70-81 for the same month:
b) ISO Incentive Plant Activity on Lines 41 to 52 for the same month: and
c) The previous month balance of the Transmission Plant - ISO amounts on Lines 1-13.
For instance, the amount for May of the Prior Year (on Line 6) for Account 353 (Column 5) is the sum of the following values:
a) the "Other ISO Transmission Activity without Incentive Plant Activity" for May of the Prior Year (on Line 74, Column 5);
b) the "ISO Incentive Plant Activity" for May of the Prior Year (on Line 45, Column 5),
c) and the "Transmission Plant - ISO" amount for April of the Prior Year (on Line 5, Column 5)."
2) Amounts on Line 15 must match 6-Plant Study amounts for Distribution Plant - ISO for previous year.
Amounts on Line 16 must match amounts on 6-PlantStudy for Distribution Plant - ISO.
3) Includes recorded Transmission Plant-In-Service additions, retirements, transfers and adjustments. From SCE internal accounting records.
4) Column 12 matches 'Activity for Incentive Projects' on 14-IncentivePlant, Lines 40 to 53. Other columns from SCE internal accounting records.
5) Amount in matrix on lines 28 to 39 minus amount in matrix on lines 41 to 52
6) Amount on Line 13 less amount on Line 1 for each account.
7) Line 53
8) Amount on Line 67 less amount on Line 68 for each account.
9) For each column (FERC Account) divide Line 69 by Line 66 to arrive at a ratio for each column.
Apply the ratio of each column to each monthly value from Lines 54-65 to calculate the values for
the corresponsing months listed in Lines 70-81.

29						
30	**Total Distribution**	**$3,309,189,889**	L 24 + L 28	**$0**	**0.00%**	Note 2

Notes:

1) Total transmission does not include account 359.1 "Asset Retirement Costs for Transmission Plant"
Total on this line is also equal to FF1 207.58g (Total Transmission Plant)
less FF1 207.57g (Asset Retirement Costs for Transmission Plant).
2) Only accounts 360-362 included as there is no ISO plant in any other Distribution accounts.

Instructions:

1) Perform annual Transmission Study pursuant to instructions in tariff.
2) Enter total amounts of plant from FERC Form 1 in Column 1, "Total Plant".
3) Enter ISO portion of plant in Column 2, "Transmission Plant - ISO, or "Distribution Plant - ISO".

Notes:

1) Amounts on Line 13 based on current year Plant Study. Amounts on Line 1 shall be based previous year Plant Study, and shall match amounts on Line 13 in previous year Annual Update.
The amounts for each month on the remaining lines are calculated by summing the following values:
   a) Depreciation Expense (on Lines 40 to 51) for the same month;
   b) Other Transmission Activity (on Lines 69 to 80) for the same month; and
   c) Balances for Transmission Depreciation Reserve (on Lines 1 to 13) for the previous month.
For instance, the amount for May of the Prior Year (on Line 6) for Account 353 (Column 5) is the sum of the following values:
   a) Depreciaiton Expense for May of the Prior Year (on Line 44, Column 5);
   b) Other Transmission Activity for Mav of the Prior Year (on Line 73, Column 5); and
   c) The balances for Transmission Depreciation Reserve for April of the Prior Yeaer (on Line 5, column 5).
2) Amounts on Line 15 derived from Plant Study for previous year Prior Year.
   Amounts on Line 16 derived from Plant Study for Prior Year.
3) Total Transmission Activity by Account represents accumulated depreciation changes for all Transmission plant.
4) From 17-Depreciation, Lines 24 to 35.
5) Amount in matrix on lines 27 to 38 minus amount in matrix on lines 40 to 51.
6) Line 13 - Line 1.
7) Line 52.
8) Line 66 - Line 67.
9) For each column (FERC Account) divide Line 68 by Line 65 to arrive at a ratio for each column.
Apply the ratio of each column to each monthly value from Lines 53-64 to calculate the values for
the corresponsing months listed in Lines 69-80.

Calculation of Allocation Factors

Inputs are shaded yellow

1) Calculation of Transmission Wages and Salaries Allocation Factor

45	Uncollectibles Expense:	$2,284,663	Line 43 * Line 44	$4,190,493	
46	True Up TRR:	$1,082,782,309	L 41 + L 43 + L 45		

Instructions:
1) Use weighted average (by time) of the Return on Equity in effect during the Prior Year in determining the "Cost of Capital Rate" on Line 19 and the "Equity Rate of Return Including Preferred Stock" on Line 23 in the event that the ROE is revised during the Prior Year. In this event, the ROE used in Schedule 1 will differ from the ROE used in this Schedule 4, because the Schedule 1 ROE will be the most recent ROE, whereas the Schedule 4 Cost of Capital Rate and Equity Rate of Return including Com. + Pref. Stock will be based on the weighted-average ROE.

$4,413,393	A&G Order 668 Adj
-$18	A&G 923 Exclusion
-$36,232	A&G 920 Linkage Adj
-$15,349	FERC Audit Refund - Compromised Settlements
-$171,302	FERC Audit Refund - AFUDC
$4,190,493	Total Adjustment

Calculation of weighted average Cost of Capital Rate in Prior Year:
If ROE does not change during year, then attribute all days to Line a "ROE at end of Prior Year" and none to "ROE at start of PY"

		Percentage	Reference:	From	To	Days ROE In Effect
a	ROE at end of Prior Year	11.20%	See Line e below	Jan 1, 2018	Dec 31, 2018	365
b	ROE start of Prior Year	11.20%	See Line f below			
c					Total days in year:	365
d	Wtd. Avg. ROE in Prior Year	11.20%	((Line a ROE * Line a days) + (Line b ROE * Line b days)) / Total Days in Year			

Commission Decisions approving ROE:

		Reference:
e	End of Prior Year	Second Formula Rate ER18-169 Settlement
f	Beginning of Prior Year	Second Formula Rate ER18-169 Settlement

		Percentage	Reference:
g	Wtd. Cost of Long Term Debt	2.1170%	1-Base TRR L 51
h	Wtd.Cost of Preferred Stock	0.4601%	1-Base TRR L 52
i	Wtd.Cost of Common Stock	5.2247%	1-Base TRR L 47 * Line d
j	Cost of Capital Rate	7.8019%	Sum of Lines g to i

Calculation of Equity Rate of Return Including Common and Preferred Stock:

		Percentage	Reference:
k		5.6848%	Sum of Lines h to i

Notes:
1) True Up TRR Incentive Adder Reversal backs out the revenue requirement associated with any project-specific Incentive Adders (line 39) for True Up Years during the term of the Second Formula Rate. Applicable pursuant to settlement under ER18-169.

120	Total:	$6,007	$354,398	$58,513,541	$43,056,324	-$60,666	$21,878,645	$65,549,845	$7,722	-$2,096	$696,660	$190,000,378

Notes:

1) Amounts on Line 13 from corresponding account Schedule 7, column 2.
Amounts on Line 1 must match corresponding account Schedule 7, Column 2 for previous year.
The amounts for each month on the remaining lines are calculated by summing the following values:
a) Other ISO Transmission Activity without Incentive Plant Activity on Lines 108-119 for the same month:
b) ISO Incentive Plant Activity on Lines 67 to 78 for the same month: and
c) The previous month balance of the Transmission Plant - ISO amounts on Lines 1-13.
For instance, the amount for May of the Prior Year (on Line 6) for Account 353 (Column 5) is the sum of the following values:
a) the "Other ISO Transmission Activity without Incentive Plant Activity" for May of the Prior Year (on Line 112, Column 5);
b) the "ISO Incentive Plant Activity" for May of the Prior Year (on Line 71, Column 5),
c) and the "Transmission Plant - ISO" amount for April of the Prior Year (on Line 5, Column 5).
2) Amounts on Line 15 must match 6-Plant Study amounts for Distribution Plant - ISO for previous year.
Amounts on Line 16 must match amounts on 6-PlantStudy for Distribution Plant - ISO.
3) Reconciles to BOY and EOY FERC Form 1 (FF1 207, Lines 48-56 , Column g).
4) Includes recorded Transmission Plant-In-Service additions, retirements, transfers and adjustments. From SCE internal acounting records.
5) Includes balances for SCE Incentive Projects.
6) Monthly differences from previous matrix. Other columns from SCE internal accounting records.
7) Amount in matrix on lines 41 to 52 minus amount in matrix on lines 67 to 78
8) Amount in "Total Transmission Activity Not Including Incentive Plant Activity" matrix divided by Total on Line 92 for each account/month.
9) Amount on Line 13 less amount on Line 1 for each account.
10) Line 79
11) Amount on Line 105 less amount on Line 106 for each account.
12) For each column (FERC Account) divide Line 107 by Line 92 to arrive at a ratio for each column.
Apply the ratio of each column to each monthly value from Lines 80-91 to calculate the values for
the corresponding months listed in Lines 108-119.

27	362	$2,727,819,402	FF1 207.62g	$0	0.00%	
28	**Total Structures**	$3,424,321,664	L 26 + L 27	$0	0.00%	
29						
30	**Total Distribution**	**$3,550,349,861**	L 24 + L 28	**$0**	**0.00%**	Note 2

Notes:

1) Total transmission does not include account 359.1 "Asset Retirement Costs for Transmission Plant"
Total on this line is also equal to FF1 207.58g (Total Transmission Plant)
less FF1 207.57g (Asset Retirement Costs for Transmission Plant).
2) Only accounts 360-362 included as there is no ISO plant in any other Distribution accounts.

Instructions:

1) Perform annual Transmission Study pursuant to instructions in tariff.
2) Enter total amounts of plant from FERC Form 1 in Column 1, "Total Plant".
3) Enter ISO portion of plant in Column 2, "Transmission Plant - ISO, or "Distribution Plant - ISO".

Accumulated Depreciation Reserve

Notes:

1) Amounts on Line 13 based on current year Plant Study. Amounts on Line 1 shall be based on previous year Plant Study, and shall match amounts on Line 13 in previous year Annual Update.

The amounts for each month on the remaining lines are calculated by summing the following values:

a) Depreciation Expense (on Lines 27 to 38) for the same month:

b) Other Transmission Activity (on Lines 55 to 66) for the same month; and

c) Balances for Transmission Depreciation Reserve (on Lines 1 to 13) for the previous month.

For instance, the amount for May of the Prior Year (on Line 6) for Account 353 (Column 5) is the sum of the following values:

a) Depreciation Expense for May of the Prior Year (on Line 44, Column 5);

b) Other Transmission Activity for May of the Prior Year (on Line 59, Column 5); and

c) The balances for Transmission Depreciation Reserve for April of the Prior Year (on Line 5, column 5).

2) Amounts on Line 15 derived from Plant Study for previous year Prior Year.

Amounts on Line 16 derived from Plant Study for Prior Year.

3) From 17-Depreciation, Lines 24 to 35.

4) From 6-PlantInService, Lines 93 to 104.

5) Line 13 - Line 1.

6) Line 39.

7) Line 52 - Line 53.

8) Multiply the montly "Total Transmission Allocation Factors" ratios found in Lines 40-51 by the "Other Activity" on Line 54.

Calculation of Allocation Factors

40	True Up TRR without Franchise Fees and Uncollectibles Expense included:	Line 38 + Line 39 + Line 39a	$1,024,185,888

E) Calculation of final True Up TRR with Franchise Fees and Uncollectibles Expenses

Line			Reference:	Change In TO2021 TUTRR	
41	True Up TRR wo FF:	$1,024,185,888	Line 40		
42	Franchise Fee Factor:	0.925%	28-FFU, L 5		
43	Franchise Fee Expense:	$9,471,751	Line 41 * Line 42	$1,035,843,260	TO2021 Annual Update - Attachment 5, Sch4, Line 46
44	Uncollectibles Expense Factor:	0.213%	28-FFU, L 5	$1,031,044,752	
45	Uncollectibles Expense:	$2,185,620	Line 43 * Line 44	$4,798,508	
46	True Up TRR:	$1,035,843,260	L 41 + L 43 + L 45		

Instructions:
1) Use weighted average (by time) of the Return on Equity in effect during the Prior Year in determining the "Cost of Capital Rate" on Line 19 and the "Equity Rate of Return Including Preferred Stock" on Line 23 in the event that the ROE is revised during the Prior Year. In this event, the ROE used in Schedule 1 will differ from the ROE used in this Schedule 4, because the Schedule 1 ROE will be the most recent ROE, whereas the Schedule 4 Cost of Capital Rate and Equity Rate of Return including Com. + Pref. Stock will be based on the weighted-average ROE.

Calculation of weighted average Cost of Capital Rate in Prior Year:
If ROE does not change during year, then attribute all days to Line a "ROE at end of Prior Year" and none to "ROE at start of PY"

		Percentage	Reference:	From	To	Days ROE In Effect
a	ROE at end of Prior Year	10.30%	See Line e below	Nov 12, 2019	Dec 31, 2019	50
b	ROE start of Prior Year	11.20%	See Line f below	Jan 1, 2019	Nov 11, 2019	315
c					Total days in year:	365
d	Wtd. Avg. ROE in Prior Year	11.08%	((Line a ROE * Line a days) + (Line b ROE * Line b days)) / Total Days in Year			

Commission Decisions approving ROE:

		Reference:
e	End of Prior Year	Settlement of TO2019A (ER19-1553)
f	Beginning of Prior Year	169 FERC ¶ 61,177

		Percentage	Reference:
g	Wtd. Cost of Long Term Debt	2.1804%	1-Base TRR L 51
h	Wtd.Cost of Preferred Stock	0.4170%	1-Base TRR L 52
i	Wtd.Cost of Common Stock	4.9757%	1-Base TRR L 47 * Line d
j	Cost of Capital Rate	7.5731%	Sum of Lines g to i

Calculation of Equity Rate of Return Including Common and Preferred Stock:

		Percentage	Reference:
k		5.3927%	Sum of Lines h to i

Notes:
1) True Up TRR Incentive Adder Reversal backs out the revenue requirement associated with any project-specific Incentive Adders (line 39) for True Up Years during the term of the Second Formula Rate. Applicable pursuant to settlement under ER18-169.

Notes:

1) Amounts on Line 13 from corresponding account Schedule 7, column 2.
Amounts on Line 1 must match corresponding account Schedule 7, Column 2 for previous year.
The amounts for each month on the remaining lines are calculated by summing the following values:
a) Other ISO Transmission Activity without Incentive Plant Activity on Lines 108-119 for the same month:
b) ISO Incentive Plant Activity on Lines 67 to 78 for the same month; and
c) The previous month balance of the Transmission Plant - ISO amounts on Lines 1-13.
For instance, the amount for May of the Prior Year (on Line 6) for Account 353 (Column 5) is the sum of the following values:
a) the "Other ISO Transmission Activity without Incentive Plant Activity" for May of the Prior Year (on Line 112, Column 5);
b) the "ISO Incentive Plant Activity" for May of the Prior Year (on Line 71, Column 5),
c) and the "Transmission Plant - ISO" amount for April of the Prior Year (on Line 5, Column 5).
2) Amounts on Line 15 must match 6-Plant Study amounts for Distribution Plant - ISO for previous year.
Amounts on Line 16 must match amounts on 6-PlantStudy for Distribution Plant - ISO.
3) Reconciles to BOY and EOY FERC Form 1 (FF1 207, Lines 48-56 , Column g).
4) Includes recorded Transmission Plant-In-Service additions, retirements, transfers and adjustments. From SCE internal acounting records.
5) Includes balances for SCE Incentive Projects.
6) Monthly differences from previous matrix. Other columns from SCE internal accounting records.
7) Amount in matrix on lines 41 to 52 minus amount in matrix on lines 67 to 78
8) Amount in "Total Transmission Activity Not Including Incentive Plant Activity" matrix divided by Total on Line 92 for each account/month.
9) Amount on Line 13 less amount on Line 1 for each account.
10) Line 79
11) Amount on Line 105 less amount on Line 106 for each account.
12) For each column (FERC Account) divide Line 107 by Line 92 to arrive at a ratio for each column.
Apply the ratio of each column to each monthly value from Lines 80-91 to calculate the values for
the corresponding months listed in Lines 108-119.

28	**Total Structures**	$3,766,840,978	L 26 + L 27	$0	0.00%	
29						
30	**Total Distribution**	**$3,895,884,937**	L 24 + L 28	**$0**	**0.00%**	Note 2

Notes:

1) Total transmission does not include account 359.1 "Asset Retirement Costs for Transmission Plant"
Total on this line is also equal to FF1 207.58g (Total Transmission Plant)
less FF1 207.57g (Asset Retirement Costs for Transmission Plant).
2) Only accounts 360-362 included as there is no ISO plant in any other Distribution accounts.

Instructions:

1) Perform annual Transmission Study pursuant to instructions in tariff.
2) Enter total amounts of plant from FERC Form 1 in Column 1, "Total Plant".
3) Enter ISO portion of plant in Column 2, "Transmission Plant - ISO, or "Distribution Plant - ISO".

Accumulated Depreciation Reserve

Input cells are shaded yellow

1) Transmission Depreciation Reserve - ISO

Notes:

1) Amounts on Line 13 based on current year Plant Study. Amounts on Line 1 shall be based on previous year Plant Study, and shall match amounts on Line 13 in previous year Annual Update.

The amounts for each month on the remaining lines are calculated by summing the following values:

a) Depreciation Expense (on Lines 27 to 38) for the same month;
b) Other Transmission Activity (on Lines 55 to 66) for the same month; and
c) Balances for Transmission Depreciation Reserve (on Lines 1 to 13) for the previous month.

For instance, the amount for May of the Prior Year (on Line 6) for Account 353 (Column 5) is the sum of the following values:

a) Depreciation Expense for May of the Prior Year (on Line 44, Column 5);
b) Other Transmission Activity for May of the Prior Year (on Line 59, Column 5); and
c) The balances for Transmission Depreciation Reserve for April of the Prior Year (on Line 5, column 5).

2) Amounts on Line 15 derived from Plant Study for previous year Prior Year.
Amounts on Line 16 derived from Plant Study for Prior Year.

3) From 17-Depreciation, Lines 24 to 35.
4) From 6-PlantInService, Lines 93 to 104.
5) Line 13 - Line 1.
6) Line 39.
7) Line 52 - Line 53.
8) Multiply the montly "Total Transmission Allocation Factors" ratios found in Lines 40-51 by the "Other Activity" on Line 54.

E) Calculation of final True Up TRR with Franchise Fees and Uncollectibles Expenses

Line			Reference:	Change In TO2021 TUTRR	
41	True Up TRR wo FF:	$1,038,057,024	Line 40		
42	Franchise Fee Factor:	0.925%	28-FFU, L 5		
43	Franchise Fee Expense:	$9,600,032	Line 41 * Line 42	$1,049,872,278	
44	Uncollectibles Expense Factor:	0.213%	28-FFU, L 5	$1,045,077,007	TO2021 Annual Update - Attachment 1, Sch4, Line 46
45	Uncollectibles Expense:	$2,215,222	Line 41 * Line 44	$4,795,272	
46	True Up TRR:	$1,049,872,278	L 41 + L 43 + L 45		

Instructions:
1) Use weighted average (by time) of the Return on Equity in effect during the Prior Year in determining the "Cost of Capital Rate" on Line 19 and the "Equity Rate of Return Including Preferred Stock" on Line 23 in the event that the ROE is revised during the Prior Year. In this event, the ROE used in Schedule 1 will differ from the ROE used in this Schedule 4, because the Schedule 1 ROE will be the most recent ROE, whereas the Schedule 4 Cost of Capital Rate and Equity Rate of Return including Com. + Pref. Stock will be based on the weighted-average ROE.

Calculation of weighted average Cost of Capital Rate in Prior Year:
If ROE does not change during year, then attribute all days to Line a "ROE at end of Prior Year" and none to "ROE at start of PY"

		Percentage	Reference:	From	To	Days ROE In Effect
a	ROE at end of Prior Year	10.30%	See Line e below	Nov 12, 2019	Dec 31, 2019	50
b	ROE start of Prior Year	11.20%	See Line f below	Jan 1, 2019	Nov 11, 2019	315
c					Total days in year:	365
d	Wtd. Avg. ROE in Prior Year	11.08%	((Line a ROE * Line a days) + (Line b ROE * Line b days)) / Total Days in Year			

Commission Decisions approving ROE:

		Reference:

120	Total:	$1,139,482	$457,971	$58,590,459	$153,184,533	$29,403,220	$14,548,682	$86,913,494	-$39	$5,044	$2,012,873	$346,255,720

Notes:

1) Amounts on Line 13 from corresponding account Schedule 7, column 2.
Amounts on Line 1 must match corresponding account Schedule 7, Column 2 for previous year.

The amounts for each month on the remaining lines are calculated by summing the following values:

a) Other ISO Transmission Activity without Incentive Plant Activity on Lines 108-119 for the same month;
b) ISO Incentive Plant Activity on Lines 67 to 78 for the same month; and
c) The previous month balance of the Transmission Plant - ISO amounts on Lines 1-13.

For instance, the amount for May of the Prior Year (on Line 61 for Account 353 /Column 5) is the sum of the following values:

a) the "Other ISO Transmission Activity without Incentive Plant Activity" for May of the Prior Year (on Line 112, Column 5);
b) the "ISO Incentive Plant Activity" for May of the Prior Year (on Line 71, Column 5),
c) and the "Transmission Plant - ISO" amount for April of the Prior Year (on Line 5, Column 5).

2) Amounts on Line 15 must match 6-Plant Study amounts for Distribution Plant - ISO for previous year.
Amounts on Line 16 must match amounts on 6-PlantStudy for Distribution Plant - ISO.
3) Reconciles to BOY and EOY FERC Form 1 (FF1 207, Lines 48-56 , Column g). Workpaper: WP Schedule 6&8
4) Includes recorded Transmission Plant-In-Service additions, retirements, transfers and adjustments. Monthly differences from previous matrix.
5) Includes balances for SCE Incentive Projects.
6) Monthly differences from previous matrix
7) Amount in matrix on lines 41 to 52 minus amount in matrix on lines 67 to 78
8) Amount in "Total Transmission Activity Not Including Incentive Plant Activity" matrix divided by Total on Line 92 for each account/month.
9) Amount on Line 13 less amount on Line 1 for each account.
10) Line 79
11) Amount on Line 105 less amount on Line 106 for each account.
12) For each column (FERC Account) divide Line 107 by Line 92 to arrive at a ratio for each column.
Apply the ratio of each column to each monthly value from Lines 80-91 to calculate the values for the corresponsing months listed in Lines 108-119.

28	**Total Structures**	$3,766,840,978	L 26 + L 27	$0	0.00%	
29						
30	**Total Distribution**	**$3,895,884,937**	L 24 + L 28	**$0**	**0.00%**	Note 2

Notes:

1) Total transmission does not include account 359.1 "Asset Retirement Costs for Transmission Plant"
Total on this line is also equal to FF1 207.58g (Total Transmission Plant)
less FF1 207.57g (Asset Retirement Costs for Transmission Plant).
2) Only accounts 360-362 included as there is no ISO plant in any other Distribution accounts.

Instructions:

1) Perform annual Transmission Study pursuant to instructions in tariff.
2) Enter total amounts of plant from FERC Form 1 in Column 1, "Total Plant".
3) Enter ISO portion of plant in Column 2, "Transmission Plant - ISO, or "Distribution Plant - ISO".

Notes:

1) Amounts on Line 13 based on current year Plant Study. Amounts on Line 1 shall be based on previous year Plant Study, and shall match amounts on Line 13 in previous year Annual Update.

The amounts for each month on the remaining lines are calculated by summing the following values:

a) Depreciation Expense (on Lines 27 to 38) for the same month;
b) Other Transmission Activity (on Lines 55 to 66) for the same month; and
c) Balances for Transmission Depreciation Reserve (on Lines 1 to 13) for the previous month.

For instance, the amount for May of the Prior Year (on Line 6) for Account 353 (Column 5) is the sum of the following values:

a) Depreciation Expense for May of the Prior Year (on Line 44, Column 5);
b) Other Transmission Activity for May of the Prior Year (on Line 59, Column 5); and
c) The balances for Transmission Depreciation Reserve for April of the Prior Year (on Line 5, column 5).

2) Amounts on Line 15 derived from Plant Study for previous year Prior Year.
Amounts on Line 16 derived from Plant Study for Prior Year.

3) From 17-Depreciation, Lines 24 to 35.
4) From 6-PlantInService, Lines 93 to 104.
5) Line 13 - Line 1.
6) Line 39.
7) Line 52 - Line 53.
8) Multiply the montly "Total Transmission Allocation Factors" ratios found in Lines 40-51 by the "Other Activity" on Line 54.

Calculation of Allocation Factors Inputs are shaded yellow

45	Uncollectibles Expense:	$16,265,341	Line 41 * Line 44	-$270,477	
46	True Up TRR:	$1,235,938,600	L 41 + L 43 + L 45		

Instructions:
1) Use weighted average (by time) of the Return on Equity in effect during the Prior Year in determining the "Cost of Capital Rate" on Line 19 and the "Equity Rate of Return Including Preferred Stock" on Line 23 in the event that the ROE is revised during the Prior Year. In this event, the ROE used in Schedule 1 will differ from the ROE used in this Schedule 4, because the Schedule 1 ROE will be the most recent ROE, whereas the Schedule 4 Cost of Capital Rate and Equity Rate of Return including Com. + Pref. Stock will be based on the weighted-average ROE.

-$91,064	FERC Audit Refund-Compromised Settlements
-$179,414	FERC Audit Refund-AFUDC
-$270,477	Total Adjustment

Calculation of weighted average Cost of Capital Rate in Prior Year:
If ROE does not change during year, then attribute all days to Line a "ROE at end of Prior Year" and none to "ROE at start of PY"

		Percentage	Reference:	From	To	Days ROE In Effect
a	ROE at end of Prior Year	10.30%	See Line e below	Jan 1, 2020	Dec 31, 2020	365
b	ROE start of Prior Year		See Line f below			
c					Total days in year:	365
d	Wtd. Avg. ROE in Prior Year	10.30%	((Line a ROE * Line a days) + (Line b ROE * Line b days)) / Total Days in Year			

Commission Decisions approving ROE:

Notes:

1) Amounts on Line 13 from corresponding account Schedule 7, column 2.
Amounts on Line 1 must match corresponding account Schedule 7, Column 2 for previous year.
The amounts for each month on the remaining lines are calculated by summing the following values:
a) Other ISO Transmission Activity without Incentive Plant Activity on Lines 108-119 for the same month:
b) ISO Incentive Plant Activity on Lines 67 to 78 for the same month; and
c) The previous month balance of the Transmission Plant - ISO amounts on Lines 1-13.
For instance, the amount for May of the Prior Year (on Line 6) for Account 353 (Column 5) is the sum of the following values:
a) the "Other ISO Transmission Activity without Incentive Plant Activity" for May of the Prior Year (on Line 112, Column 5);
b) the "ISO Incentive Plant Activity" for May of the Prior Year (on Line 71, Column 5),
c) and the "Transmission Plant - ISO" amount for April of the Prior Year (on Line 5, Column 5).
2) Amounts on Line 15 must match 6-Plant Study amounts for Distribution Plant - ISO for previous year.
Amounts on Line 16 must match amounts on 6-PlantStudy for Distribution Plant - ISO.
3) Reconciles to BOY and EOY FERC Form 1 (FF1 207, Lines 48-56 , Column g). Workpaper: WP Schedule 6&8
4) Includes recorded Transmission Plant-In-Service additions, retirements, transfers and adjustments. Monthly differences from previous matrix.
5) Includes balances for SCE Incentive Projects.
6) Monthly differences from previous matrix.
7) Amount in matrix on lines 41 to 52 minus amount in matrix on lines 67 to 78
8) Amount in "Total Transmission Activity Not Including Incentive Plant Activity" matrix divided by Total on Line 92 for each account/month.
9) Amount on Line 13 less amount on Line 1 for each account.
10) Line 79
11) Amount on Line 105 less amount on Line 106 for each account.
12) For each column (FERC Account) divide Line 107 by Line 92 to arrive at a ratio for each column.
Apply the ratio of each column to each monthly value from Lines 80-91 to calculate the values for
the corresponding months listed in Lines 108-119.

27	362	$3,106,963,772	FF1 207.62g	$0	0.00%	
28	**Total Structures**	$3,951,577,302	L 26 + L 27	$0	0.00%	
29						
30	**Total Distribution**	**$4,081,190,499**	L 24 + L 28	**$0**	**0.00%**	Note 2

Notes:

1) Total transmission does not include account 359.1 "Asset Retirement Costs for Transmission Plant"
Total on this line is also equal to FF1 207.58g (Total Transmission Plant)
less FF1 207.57g (Asset Retirement Costs for Transmission Plant).
2) Only accounts 360-362 included as there is no ISO plant in any other Distribution accounts.

Instructions:

1) Perform annual Transmission Study pursuant to instructions in tariff.
2) Enter total amounts of plant from FERC Form 1 in Column 1, "Total Plant".
3) Enter ISO portion of plant in Column 2, "Transmission Plant - ISO, or "Distribution Plant - ISO".

Notes:

1) Amounts on Line 13 based on current year Plant Study. Amounts on Line 1 shall be based on previous year Plant Study, and shall match amounts on Line 13 in previous year Annual Update.

The amounts for each month on the remaining lines are calculated by summing the following values:

a) Depreciation Expense (on Lines 27 to 38) for the same month;
b) Other Transmission Activity (on Lines 55 to 66) for the same month; and
c) Balances for Transmission Depreciation Reserve (on Lines 1 to 13) for the previous month.

For instance, the amount for May of the Prior Year (on Line 6) for Account 353 (Column 5) is the sum of the following values:

a) Depreciation Expense for May of the Prior Year (on Line 44, Column 5);
b) Other Transmission Activity for May of the Prior Year (on Line 59, Column 5); and
c) The balances for Transmission Depreciation Reserve for April of the Prior Year (on Line 5, column 5).

2) Amounts on Line 15 derived from Plant Study for previous year Prior Year.
Amounts on Line 16 derived from Plant Study for Prior Year.

3) From 17-Depreciation, Lines 24 to 35.
4) From 6-PlantInService, Lines 93 to 104.
5) Line 13 - Line 1.
6) Line 39.
7) Line 52 - Line 53.
8) Multiply the montly "Total Transmission Allocation Factors" ratios found in Lines 40-51 by the "Other Activity" on Line 54.

Calculation of Allocation Factors Inputs are shaded yellow

SCHEDULE 3

ONE TIME ADJUSTMENT PRIOR PERIOD

WORKPAPERS

Explanation of One Time Adjustment to Prior Period
True Up TRR Pursuant to Appendix IX, Attachment 1, Paragraph 3(d)(8)

		TO13/TO2020/TO2021	TO2022
		TUTRR Change	One-Time Adj*
Changes to 2017			
1. On June 28, 2021, FERC issued SCE's Audit Report in Docket No. FA20-1 and required refunds related to compromise employee settlements. For 2017, SCE is refunding $3,807,650 from A&G, specifically FERC Account 925 and the impact of this change is a decrease in the 2017 True Up TRR of -$218,295.	A	-$218,295	-$245,899
Total One-Time Adjustment for 2017 Reflected in the November TO2022 Annual Update Filing	**A**	**-$218,295**	**-$245,899**
Changes to 2018			
1. In preparing the TO2022 Draft Annual Update, SCE has identified an input error relating to an A&G exclusion affecting the True Up TRR of calendar year 2018. This error relates to an exclusion found in the workpaper titled "WP Schedule 20 A&G", tab titled "ShareholderAndOther", Section 3 - Order 668 Amount Transferred from O&M Accounts 569. The amount to be transferred to A&G from O&M, $37,524,555 in 2018, should have been entered as a positive value in the workpaper. Instead, due to an input error this entry was entered as a negative value. This error caused total A&G to be reduced by the entered amount, rather than increased as intended. As such, SCE is correcting this A&G expense of $37,524,555 to include this additional expense. SCE has incorporated this correction that changes the TO2020 A&G expenses and the impact of this change is an increase in the 2018 True Up TRR of $4,413,393.	B	$4,413,393	$4,767,468
2. In preparing the TO2022 Draft Annual Update, SCE discovered that it had outside counsel expenses related to employment litigation or arbitration matters that were subsequently resolved by the Company which were not excluded. The amount of expenses were overstated by $306, which should have been excluded in 2018. As such, SCE is including an additional TO2020 A&G exclusion of $306 to remove these additional expenses. SCE has incorporated this correction that changes the TO2020 A&G exclusions and the impact of this change is a decrease in the 2018 True Up TRR of $18.	C	-$18	-$19
3. In preparing the TO2022 Draft Annual Update, SCE discovered that it inadvertently had a linkage error in the calculation of Account 920 A&G exclusions related to ACE/Spot bonuses. The amount of expenses were overstated by $616,125, which should have been excluded in 2018. As such, SCE is including an additional TO2020 A&G exclusion of $616,215 to remove these additional expenses. SCE has incorporated this correction that changes the TO2020 A&G exclusions and the impact of this change is a decrease in the 2018 True Up TRR of $36,232.	D	-$36,232	-$39,139

4. On June 28, 2021, FERC issued SCE's Audit Report in Docket No. FA20-1 and required refunds related to compromise employee settlements. For 2018, SCE is refunding $261,000 from A&G, specifically FERC Account 925 and the impact of this change is a decrease in the 2018 True Up TRR of -$15,349.	E	-$15,349	-$16,580
Total One-Time Adjustment for 2018 Reflected in the November TO2022 Annual Update Filing	**F = B + C + D + E**	**$4,361,794**	**$4,711,729**
Changes to 2019			
1. In preparing the TO2022 Draft Annual Update, SCE has identified an input error relating to an A&G exclusion affecting the True Up TRR of calendar year 2019. This error relates to an exclusion found in the workpaper titled "WP Schedule 20 A&G", tab titled "ShareholderAndOther", Section 3 - Order 668 Amount Transferred from O&M Accounts 569. The amount to be transferred to A&G from O&M, $39,147,707 in 2019, should have been entered as a positive value in the workpaper. Instead, due to an input error this entry was entered as a negative value. This error caused total A&G to be reduced by the entered amount, rather than increased as intended. As such, SCE is correcting this A&G expense of $39,147,707 to include this additional expense. SCE has incorporated this correction that changes the TO2021 A&G expenses and the impact of this change is an increase in the 2019 True Up TRR of $5,265,039.	G	$5,265,039	$5,410,074
2. In preparing the TO2022 Draft Annual Update, SCE discovered that it had outside counsel expenses related to employment litigation or arbitration matters that were subsequently resolved by the Company which were not excluded. The amount of expenses were overstated by $481, which should have been excluded in 2019. As such, SCE is including an additional TO2021 A&G exclusion of $481 to remove these additional expenses. SCE has incorporated this correction that changes the TO2021 A&G exclusions and the impact of this change is a decrease in the 2019 True Up TRR of $32.	H	-$32	-$33
3. In preparing the TO2022 Draft Annual Update, SCE discovered that it had inadvertently included a BRRBA Distribution credit adjustment adding distribution costs to A&G. The amount of expenses were overstated by $2,034,939, which should have been excluded in 2019. As such, SCE is removing the TO2021 A&G negative exclusion of $2,034,939 to remove these credit adjustments. SCE has incorporated this correction that changes the TO2021 A&G exclusions and the impact of this change is a decrease in the 2019 True Up TRR of $136,841.	I	-$136,841	-$140,611

4. In preparing the TO2022 Draft Annual Update, SCE discovered that it had inadvertently excluded a credit related to Pensions & Benefits Billed to Affiliates as a shareholder exclusion. The amount of expenses were overstated by $338,044, which should have been excluded in 2019. As such, SCE is removing the TO2021 A&G negative exclusion of $338,044. SCE has incorporated this correction that changes the TO2021 A&G exclusions and the impact of this change is a decrease in the 2019 True Up TRR of $22,732.	J	-$22,732	-$23,358
5. On June 28, 2021, FERC issued SCE's Audit Report in Docket No. FA20-1 and required refunds related to compromise employee settlements. For 2019, SCE is refunding $1,980,050 from A&G, specifically FERC Account 925 and the impact of this change is a decrease in the 2019 True Up TRR of -$133,150.	K	-$133,150	-$136,818
6. During the TO2022 Formula Rate discover process, SCE discovered an overstated A&G exclusion related to EIX costs. In 2019 SCE made accounting changes moving some of the EIX costs from FERC Account 923 to 426. Since FERC account 426 is not included in the Formula Rate, SCE is reducing the A&G EIX costs exclusion by $79,472. As such, SCE is removing $79,472 from A&G, specifically FERC Account 923 and the impact of this change is an increase in the 2019 True Up TRR of $5,344.	L	$5,344	$5,491
Total One-Time Adjustment for 2019 Reflected in the November TO2022 Annual Update Filing	**M = G + H + I + J + K + L**	**$4,977,628**	**$5,114,745**
Total One-Time Adjustment for 2017 through 2019 Reflected in the November TO2022 Annual Update Filing	**N = A + F + M**	**$9,121,127**	**$9,580,576**

* The TO2022 One-Time Adjustment is equal to the TO13/TO2020/TO2021 TUTRR Change, plus interest through December 31, 2019.

Instructions:
1) Use weighted average (by time) of the Return on Equity in effect during the Prior Year in determining the "Cost of Capital Rate" on Line 18 and the "Equity Rate of Return Including Preferred Stock" on Line 22 in the event that the ROE is revised during the Prior Year. In this event, the ROE used in Schedule 1 will differ from the ROE used in this Schedule 4, because the Schedule 1 ROE will be the most recent ROE, whereas the Schedule 4 Cost of Capital Rate and Equity Rate of Return including Com. + Pref. Stock will be based on the weighted-average ROE.

Calculation of weighted average Cost of Capital Rate in Prior Year:
If ROE does not change during year, then attribute all days to Line a "ROE at end of Prior Year" and none to "ROE at start of PY"

		Percentage	Reference:	From	To	Days ROE In Effect
a	ROE at end of Prior Year	9.80%	1-Base TRR L 49	Jan 1, 2017	Dec 31, 2017	365
b	ROE start of Prior Year	9.80%	See Line e below			
c					Total days in year:	365
d	Wtd. Avg. ROE in Prior Year	9.80%	((Line a ROE * Line a days) + (Line b ROE * Line b days)) / Total Days in Year			

Commission Decisions approving ROE:

		Reference:
e	End of Prior Year	Settlement in ER11-3697
f	Beginning of Prior Year	Settlement in ER11-3697

		Percentage	Reference:
g	Wtd. Cost of Long Term Debt	1.9908%	1-Base TRR L 50
h	Wtd.Cost of Preferred Stock	0.4951%	1-Base TRR L 51
i	Wtd.Cost of Common Stock	4.7641%	1-Base TRR L 46 * Line d
j	Cost of Capital Rate	7.2500%	Sum of Lines f to h

Calculation of Equity Rate of Return Including Common and Preferred Stock:

	Percentage	Reference:
k	5.2592%	Sum of Lines g to h

2) Beginning with the True Up Adjustment calculation for 2012 utilizing the True Up TRR for 2012, exclude from CWIP recovery the capital cost of facilities that were purchased for the portion of Tehachapi Segment 8 near the Chino Airport, but due to the April 25, 2011 Notice of Presumed Hazard issued to SCE by the FAA are not used in the construction of Tehachapi or in any other CWIP incentive project. Additionally, SCE will permanently exclude from Plant In Service, Rate Base, and transmission rates these capital costs if the facilities are not used in the construction of any SCE transmission project.

Note 2: Non-Officer Incentive Compensation ("NOIC") Adjustment

(NOIC includes Results Sharing, Management Incentive Program, and Non-Officer Executive Incentive Compensation).
Adjust NOIC by excluding accrued NOIC Amount and replacing with the
actual non-capitalized A&G NOIC payout.

		Amount	Source
a	Accrued NOIC Amount:	$103,811,325	SCE Records
b	Actual A&G NOIC payout:	$22,427,473	Note 2, d
c	Adjustment:	$81,383,851	

Actual non-capitalized NOIC Payouts:

	Department	Amount	Source
d	A&G	$22,427,473	SCE Records and Workpapers
e	Other	$10,140,103	SCE Records and Workpapers
f	Trans. And Dist. Business Unit	$33,565,145	SCE Records and Workpapers
g	Total:	$66,132,721	Sum of d to f

Note 3: PBOPs Exclusion Calculation

		Amount	Note:
a	Authorized PBOPs expense amount:	$40,171,333	See instruction #4
b	Prior Year FF1 PBOPs expense:	$5,046,627	SCE Records
c	PBOPs Expense Exclusion:	-$35,124,706	b - a

Note 4:

Amount in Line 31, column 2 equals amount in Line 8, column 1 because all Franchise Requirements Expenses are excluded
Franchise Fees Expenses component of the Prior Year TRR are based on Franchise Fee Factors.

Instructions:

1) Enter amounts of A&G expenses from FERC Form 1 in Lines 1 to 14.
2) Fill out "Itemization of Exclusions" table for all input cells. NOIC amount in Column 3, Line 24 is calculated in Note 2. The PBOPs exclusion in Column 4, Line 30 is calculated in Note 3.
   a) Exclude amount of any Shareholder Adjustments, costs incurred on behalf of SCE shareholders, from relevant account in Column 1.
   b) Include as an adjustment in Column 1 for Account 920 any amount excluded from Accounts 569.100, 569.200, and 569.300 in Schedule 19 (OandM) related to Order 668 costs transferred.
   c) Exclude entire amount of account 927 "Franchise Requirements" in Column 2, as those costs are recovered through the Franchise Fees Expense item.
   d) Exclude any amount of Account 930.1 "General Advertising Expense" not related to advertising for safety, siting, or informational purposes in column 1.
   e) Exclude any amount of expense relating to secondary land use and audit expenses not directly benefitting utility customers.
   f) Exclude from account 930.2:
      1) Nuclear Power Research Expenses.
      2) Write Off of Abandoned Project Expenses.
      3) Any advertising expenses within the Consultants/Professional Services category.
   g) Exclude the following costs included in any account 920-935:
      1) Any amount of "Provision for Doubtful Accounts" costs.
      2) Any amount of "Accounting Suspense" costs.
      3) Any penalties of fines.
      4) Any amount of costs recovered 100% through California Public Utilities Commission ("CPUC") rates.
   h) Exclude the following amounts of employee incentive compensation from any account 920-935:
      1) Any Long Term Incentive Compensation ("LTI") costs.
      2) Beginning with Prior Year 2012, any amount of Officer Executive Incentive Compensation ("OEIC") in excess of the amount authorized by the CPUC in Decision D.12-11-051 or subsequent decision.
      3) Beginning with Prior Year 2012, any amount of Supplemental Executive Retirement Plan ("SERP") in excess of the amount authorized by the CPUC in Decision D.12-11-051 or subsequent decision.
      4) Beginning with Prior Year 2012, any amount of NOIC in excess of the amount authorized by the CPUC in Decision D.12-11-051 or subsequent decision.
      5) Any Spot Bonus costs.
      6) Any Awards to Celebrate Excellence ("ACE") costs.
3) NOIC adjustment in Column 3, Line 24 is made by determining the difference between the total accrued NOIC amount included in the FERC Form 1 recorded cost amounts and the actual A&G NOIC payout (see note 2).
NOIC adjustment in column 3, Line 26 is made by entering the amount of accrued NOIC that is capitalized.
4) Determine the PBOPs exclusion. The authorized amount of PBOPs expense (line a) may only be revised pursuant to Commission acceptance of an SCE FPA Section 205 filing to revise the authorized PBOPs expense, in accordance with the tariff protocols. Accordingly, any amount different than the authorized PBOPs expense is excluded from account 926 (see note 3). Docket or Decision approving authorized PBOPs amount: ER16-2433
5) SCE shall make no adjustments to recorded labor amounts related to non-labor labor and/or Indirect labor in Schedule 20.

One Time Adjustment for Revised 2018 True Up TRR		
Description	**Amount**	**Source**
Revised TO2020 True Up TRR in TO2021 Filing	1,078,591,816	TO2021 Annual Filing - WP Schedule 3 - One Time Adj Prior Period, Page 20, Line 46.
Revised TO2020 True Up TRR in TO2022 Annual Update Filing	1,082,953,611	TO2022 Annual Update Filing - WP Schedule 3-One Time Adj Prior Period Page 14, Line 46
Variance*	**4,361,794**	

* Variance Includes Adjustment for:

(1) 2018 A&G signage correction for the Order 668 Transfer from O&M Account 569

(2) 2018 A&G 923 adjustment to remove outside counsel cost related to employment litigation or arbitration matters which should have been excluded.

(3) 2018 FERC Audit Refund - Compromise Settlements

Calculation of True Up TRR

A) Rate Base for True Up TRR

Line	Rate Base Item	Calculation Method	Notes	FERC Form 1 Reference or Instruction	Amount
1	ISO Transmission Plant	13-Month Avg.		6-PlantInService, Line 18	$8,666,375,347

45	Uncollectibles Expense:	$2,285,024	Line 43 * Line 44	$4,361,794	
46	True Up TRR:	$1,082,953,611	L 41 + L 43 + L 45		

Instructions:
1) Use weighted average (by time) of the Return on Equity in effect during the Prior Year in determining the "Cost of Capital Rate" on Line 19 and the "Equity Rate of Return Including Preferred Stock" on Line 23 in the event that the ROE is revised during the Prior Year. In this event, the ROE used in Schedule 1 will differ from the ROE used in this Schedule 4, because the Schedule 1 ROE will be the most recent ROE, whereas the Schedule 4 Cost of Capital Rate and Equity Rate of Return including Com. + Pref. Stock will be based on the weighted-average ROE.

$4,413,393	A&G Order 668 Adj
-$18	A&G 923 Exclusion
-$36,232	A&G 920 Linkage Adj
-$15,349	FERC Audit Refund - Compromise Settlements
$4,361,794	Total Adjustment

Calculation of weighted average Cost of Capital Rate in Prior Year:
If ROE does not change during year, then attribute all days to Line a "ROE at end of Prior Year" and none to "ROE at start of PY"

		Percentage	Reference:	From	To	Days ROE In Effect
a	ROE at end of Prior Year	11.20%	See Line e below	Jan 1, 2018	Dec 31, 2018	365
b	ROE start of Prior Year	11.20%	See Line f below			
c					Total days in year:	365
d	Wtd. Avg. ROE in Prior Year	11.20%	((Line a ROE * Line a days) + (Line b ROE * Line b days)) / Total Days in Year			

11.2% for 2018 True Up TRR pursuant to Settlement Term #3

Commission Decisions approving ROE:

		Reference:
e	End of Prior Year	Second Formula Rate ER18-169 Settlement
f	Beginning of Prior Year	Second Formula Rate ER18-169 Settlement

		Percentage	Reference:
g	Wtd. Cost of Long Term Debt	2.1170%	1-Base TRR L 51
h	Wtd.Cost of Preferred Stock	0.4601%	1-Base TRR L 52
i	Wtd.Cost of Common Stock	5.2247%	1-Base TRR L 47 * Line d
j	Cost of Capital Rate	7.8019%	Sum of Lines g to i

Calculation of Equity Rate of Return Including Common and Preferred Stock:

		Percentage	Reference:
k		5.6848%	Sum of Lines h to i

Notes:
1) True Up TRR Incentive Adder Reversal backs out the revenue requirement associated with any project-specific Incentive Adders (line 39) for True Up Years during the term of the Second Formula Rate. Applicable pursuant to settlement under ER18-169.

37	935	$699,128	$699,128		$0		

Change from $3,991,252 to $4,252,252 due to FERC Audit Refund related to compromise settlements.

Note 2: Non-Officer Incentive Compensation ("NOIC") Adjustment

Adjust NOIC by excluding accrued NOIC Amount and replacing with the actual non-capitalized A&G NOIC payout.

		Amount	Source
a	Accrued NOIC Amount:	$137,026,591	SCE Records
b	Actual A&G NOIC payout:	$17,600,289	Note 2, d
c	Adjustment:	$119,426,302	

Actual non-capitalized NOIC Payouts:

	Department	Amount	Source
d	A&G	$17,600,289	SCE Records and Workpapers
e	Other	$8,544,925	SCE Records and Workpapers
f	Trans. And Dist. Business Unit	$26,767,831	SCE Records and Workpapers
g	Total:	$52,913,045	Sum of d to f

Note 3: PBOPs Exclusion Calculation

		Amount	Note:
a	Current Authorized PBOPs Expense Amount:	$18,219,000	See instruction #4
b	Prior Year Authorized PBOPs Expense Amount:	$40,171,333	Authorized PBOPs Expense Amount during Prior Year
c	Prior Year FF1 PBOPs expense:	$18,219,000	SCE Records
d	PBOPs Expense Exclusion:	-$21,952,333	c - b

Note 4:

Amount in Line 31, column 2 equals amount in Line 8, column 1 because all Franchise Requirements Expenses are excluded Franchise Fees Expenses component of the Prior Year TRR are based on Franchise Fee Factors.

Instructions:

1) Enter amounts of A&G expenses from FERC Form 1 in Lines 1 to 14.
2) Fill out "Itemization of Exclusions" table for all input cells. NOIC amount in Column 3, Line 24 is calculated in Note 2. The PBOPs exclusion in Column 4, Line 30 is calculated in Note 3.
   a) Exclude amount of any Shareholder Adjustments, costs incurred on behalf of SCE shareholders, from relevant account in Column 1.
   b) Include as an adjustment in Column 1 for Account 920 any amount excluded from Accounts 569.100, 569.200, and 569.300 in Schedule 19 (OandM) related to Order 668 costs transferred.
   c) Exclude entire amount of account 927 "Franchise Requirements" in Column 2, as those costs are recovered through the Franchise Fees Expense item.
   d) Exclude any amount of Account 930.1 "General Advertising Expense" not related to advertising for safety, siting, or informational purposes in column 1.
   e) Exclude any amount of expense relating to secondary land use and audit expenses not directly benefitting utility customers.
   f) Exclude from account 930.2:
      1) Nuclear Power Research Expenses.
      2) Write Off of Abandoned Project Expenses.
      3) Any advertising expenses within the Consultants/Professional Services category.
   g) Exclude the following costs included in any account 920-935:
      1) Any amount of "Provision for Doubtful Accounts" costs.
      2) Any amount of "Accounting Suspense" costs.
      3) Any penalties or fines.
      4) Any amount of costs recovered 100% through California Public Utilities Commission ("CPUC") rates.
3) NOIC adjustment in Column 3, Line 24 is made by determining the difference between the total accrued NOIC amount included in the FERC Form 1 recorded cost amounts and the actual A&G NOIC payout (see note 2).
NOIC adjustment in column 3, Line 26 is made by entering the amount of accrued NOIC that is capitalized.
4) Determine the PBOPs exclusion. The authorized amount of PBOPs expense (line a) may only be revised pursuant to Commission acceptance of an SCE FPA Section 205 filing to revise the authorized PBOPs expense, in accordance with the tariff protocols. Accordingly, any amount different than the authorized PBOPs expense during the Prior Year is excluded from account 926 (see note 3). Docket or Decision approving authorized PBOPs amount: ER19-1226
5) SCE shall make no adjustments to recorded labor amounts related to non-labor labor and/or Indirect labor in Schedule 20.

Instructions:
1) Use weighted average (by time) of the Return on Equity in effect during the Prior Year in determining the "Cost of Capital Rate" on Line 19 and the "Equity Rate of Return Including Preferred Stock" on Line 23 in the event that the ROE is revised during the Prior Year. In this event, the ROE used in Schedule 1 will differ from the ROE used in this Schedule 4, because the Schedule 1 ROE will be the most recent ROE, whereas the Schedule 4 Cost of Capital Rate and Equity Rate of Return including Com. + Pref. Stock will be based on the weighted-average ROE.

Calculation of weighted average Cost of Capital Rate in Prior Year:
If ROE does not change during year, then attribute all days to Line a "ROE at end of Prior Year" and none to "ROE at start of PY"

		Percentage	Reference:	From	To	Days ROE In Effect
a	ROE at end of Prior Year	10.30%	See Line e below	Nov 12, 2019	Dec 31, 2019	50
b	ROE start of Prior Year	11.20%	See Line f below	Jan 1, 2019	Nov 11, 2019	315
c					Total days in year:	365
d	Wtd. Avg. ROE in Prior Year	11.08%	((Line a ROE * Line a days) + (Line b ROE * Line b days)) / Total Days in Year			

Commission Decisions approving ROE:

Changed from $79,510,926 to $1,215,512 due to signage error of the Order 668 Transfer from O&M Account 569.
Changed from $1,215,512 to $2,246,627 due to removal of BRRBA Distribution credit adjustment from A&G to Distribution.

Changed from $8,247,856 to $8,248,338 due to removal of outside counsel cost related to employment litigation or arbitration matters which should have been excluded.
Changed from $8,248,338 to $8,976,114 due to removal of BRRBA Distribution credit adjustment from A&G to Distribution.
Changed from $8,976,114 to $8,896,642 due to EIX costs accounting change from FERC account 923 to 426.

Changed from $152,267,278 to $154,247,328 due to FERC Audit Refund related to compromised settlements.

Changed from $15,470,760 to $15,732,311 due to removal of BRRBA Distribution credit adjustment from A&G to Distribution.
Changed from $15,732,311 to $16,070,355 due to removal of non-shareholder related credit to A&G removing Pensions & Benefits Billed to Affiliates.

Changed from $5,984,741 to $5,999,239 due to removal of BRRBA Distribution credit adjustment from A&G to Distribution.

Note 2: Non-Officer Incentive Compensation ("NOIC") Adjustment

Adjust NOIC by excluding accrued NOIC Amount and replacing with the actual non-capitalized A&G NOIC payout.

		Amount	Source
a	Accrued NOIC Amount:	$148,050,456	SCE Records
b	Actual A&G NOIC payout:	$14,080,415	Note 2, d
c	Adjustment:	$133,970,041	

Actual non-capitalized NOIC Payouts:

	Department	Amount	Source
d	A&G	$14,080,415	SCE Records and Workpapers
e	Other	$6,519,088	SCE Records and Workpapers
f	Trans. And Dist. Business Unit	$22,710,658	SCE Records and Workpapers
g	Total:	$43,310,160	Sum of d to f

Note 3: PBOPs Exclusion Calculation

		Amount	Note:
a	Current Authorized PBOPs Expense Amount:	$6,329,000	See instruction #4
b	Prior Year Authorized PBOPs Expense Amount:	$18,219,000	Authorized PBOPs Expense Amount during Prior Year
c	Prior Year FF1 PBOPs expense:	$6,329,000	SCE Records
d	PBOPs Expense Exclusion:	-$11,890,000	c - b

Note 4:

Amount in Line 31, column 2 equals amount in Line 8, column 1 because all Franchise Requirements Expenses are excluded Franchise Fees Expenses component of the Prior Year TRR are based on Franchise Fee Factors.

Instructions:

1) Enter amounts of A&G expenses from FERC Form 1 in Lines 1 to 14.
2) Fill out "Itemization of Exclusions" table for all input cells. NOIC amount in Column 3, Line 24 is calculated in Note 2. The PBOPs exclusion in Column 4, Line 30 is calculated in Note 3.
   a) Exclude amount of any Shareholder Adjustments, costs incurred on behalf of SCE shareholders, from relevant account in Column 1.
   b) Include as an adjustment in Column 1 for Account 920 any amount excluded from Accounts 569.100, 569.200, and 569.300 in Schedule 19 (OandM) related to Order 668 costs transferred.
   c) Exclude entire amount of account 927 "Franchise Requirements" in Column 2, as those costs are recovered through the Franchise Fees Expense item.
   d) Exclude any amount of Account 930.1 "General Advertising Expense" not related to advertising for safety, siting, or informational purposes in column 1.
   e) Exclude any amount of expense relating to secondary land use and audit expenses not directly benefitting utility customers.
   f) Exclude from account 930.2:
      1) Nuclear Power Research Expenses.
      2) Write Off of Abandoned Project Expenses.
      3) Any advertising expenses within the Consultants/Professional Services category.
   g) Exclude the following costs included in any account 920-935:
      1) Any amount of "Provision for Doubtful Accounts" costs.
      2) Any amount of "Accounting Suspense" costs.
      3) Any penalties or fines.
      4) Any amount of costs recovered 100% through California Public Utilities Commission ("CPUC") rates.
3) NOIC adjustment in Column 3, Line 24 is made by determining the difference between the total accrued NOIC amount included in the FERC Form 1 recorded cost amounts and the actual A&G NOIC payout (see note 2).
NOIC adjustment in column 3, Line 26 is made by entering the amount of accrued NOIC that is capitalized.
4) Determine the PBOPs exclusion. The authorized amount of PBOPs expense (line a) may only be revised pursuant to Commission acceptance of an SCE FPA Section 205 filing to revise the authorized PBOPs expense, in accordance with the tariff protocols. Accordingly, any amount different than the authorized PBOPs expense during the Prior Year is excluded from account 926 (see note 3). Docket or Decision approving authorized PBOPs amount: ER20-1382
5) SCE shall make no adjustments to recorded labor amounts related to non-labor labor and/or Indirect labor in Schedule 20.

Calculation of True Up TRR

A) Rate Base for True Up TRR

Line	Rate Base Item	Calculation Method	Notes	FERC Form 1 Reference or Instruction	Amount

37	935	$811,672	$811,672		$0		

Changed from $74,324,198 to -$3,971,216 due to signage error of the Order 668 Transfer from O&M Accounts 569.
Changed from -$3,971,216 to -$2,940,102 due to removal of BRRBA Distribution credit adjustment from A&G to Distribution.

Changed from $8,235,606 to $8,236,088 due to removal of outside counsel cost related to employment litigation or arbitration matters which should have been excluded.
Changed from $8,236,088 to $8,963,864 due to removal of BRRBA Distribution credit adjustment from A&G to Distribution.
Changed from $8,963,864 to $8,884,392 due to EIX costs accounting change from FERC account 923 to 426.

Changed from $168,752,278 to $170,732,328 due to FERC Audit Refund related to compromised settlements.

Changed from $14,093,319 to $14,354,870 due to removal of BRRBA Distribution credit adjustment from A&G to Distribution.
Changed from $14,354,870 to $14,692,914 due to removal of non-shareholder related credit to A&G removing Pensions & Benefits Billed to Affiliates.

Changed from $5,984,741 to $5,999,239 due to removal of BRRBA Distribution credit adjustment from A&G to Distribution.

Note 2: Non-Officer Incentive Compensation ("NOIC") Adjustment

Adjust NOIC by excluding accrued NOIC Amount and replacing with the actual non-capitalized A&G NOIC payout.

Workpaper: WP Schedule 20 A&G

		Amount	Source
a	Accrued NOIC Amount:	$148,050,456	SCE Records
b	Actual A&G NOIC payout:	$4,667,367	Note 2, d
c	Adjustment:	$143,383,089	

Actual non-capitalized NOIC Payouts:

	Department	Amount	Source
d	A&G	$4,667,367	SCE Records and Workpapers
e	Other	$2,525,320	SCE Records and Workpapers
f	Trans. And Dist. Business Unit	$4,239,356	SCE Records and Workpapers
g	Total:	$11,432,043	Sum of d to f

Note 3: PBOPs Exclusion Calculation

		Amount	Note:
a	Current Authorized PBOPs Expense Amount:	$6,329,000	See instruction #4
b	Prior Year Authorized PBOPs Expense Amount:	$18,219,000	Authorized PBOPs Expense Amount during Prior Year
c	Prior Year FF1 PBOPs expense:	$6,329,000	SCE Records
d	PBOPs Expense Exclusion:	-$11,890,000	c - b

Note 4:

Amount in Line 31, column 2 equals amount in Line 8, column 1 because all Franchise Requirements Expenses are excluded Franchise Fees Expenses component of the Prior Year TRR are based on Franchise Fee Factors.

Instructions:

1) Enter amounts of A&G expenses from FERC Form 1 in Lines 1 to 14.
2) Fill out "Itemization of Exclusions" table for all input cells. NOIC amount in Column 3, Line 24 is calculated in Note 2. The PBOPs exclusion in Column 4, Line 30 is calculated in Note 3.
   a) Exclude amount of any Shareholder Adjustments, costs incurred on behalf of SCE shareholders, from relevant account in Column 1.
   b) Include as an adjustment in Column 1 for Account 920 any amount excluded from Accounts 569.100, 569.200, and 569.300 in Schedule 19 (OandM) related to Order 668 costs transferred.
   c) Exclude entire amount of account 927 "Franchise Requirements" in Column 2, as those costs are recovered through the Franchise Fees Expense item.
   d) Exclude any amount of Account 930.1 "General Advertising Expense" not related to advertising for safety, siting, or informational purposes in column 1.
   e) Exclude any amount of expense relating to secondary land use and audit expenses not directly benefitting utility customers.
   f) Exclude from account 930.2:
      1) Nuclear Power Research Expenses.
      2) Write Off of Abandoned Project Expenses.
      3) Any advertising expenses within the Consultants/Professional Services category.
6) Any A&G costs associated with wildfires other than the 2017/18 Wildfire/Mudslide Events shall be reflected in A&G accounts on a cash basis during the year in which associated cash payments are made. In the event an initial cost accrual is made in a year to one or more A&G accounts 920-935, SCE shall exclude from A&G cost recovery any amount not paid in cash during that year through an entry to Column 1, Lines 24-37 of the "Itemization of Exclusions" matrix to the account in which the initial expense accrual was made. As cash payments related to the initial expense accrual are made in future years, SCE shall also include those expenses in A&G cost recovery on a cash basis through an entry to the Itemization of Exclusions matrix.

SCHEDULE 6 & 10

PRIOR YEAR AFUDC RATE

WORKPAPERS

December 31, 2020

Subject: Fourth Quarter 2020 AFUDC Rate

The following table provides the 2020 AFUDC rate and the allocation for borrowed and equity funds. The 4th quarter 2020 analysis resulted in a decrease of 4-basis points and a decrease to the annual gross nominal rate from 7.04% to 6.99%.

The update did not result in a 25-basis point change. However, the rate was still implemented. The rate adjustment was due to an update of the recorded CWIP split between the AB1054 and the non-AB1054 population used for the rate calculation.

Effective Month	Gross Nominal Rate	Power Plan System Rate / Monthly System Rate	Allocation of Gross Funds Borrowed (%) / Equity (%)
January 2020	5.084890%	5.031840% 0.419320%	44.87% / 55.13%
March 2020	5.478622%	5.417112% 0.451426%	35.73% / 64.27%
June 2020	6.240589%	6.160968% 0.513414%	31.79%/ 68.21%
September 2020	7.045520%	6.944280% 0.578690%	29.49%/ 70.51%
December 2020	6.995707%	6.895872% 0.574656%	29.39%/70.61%

ISO Study Assumptions

The following assumptions have been made in completing this analysis.

1. Devers-Mirage System

Beginning in the 2009 CPUC GRC and the 2009 FERC rate case, the Devers-Mirage system split was assumed to be completed and all 115kV facilities transferred from ISO to non-ISO. This assumption was consistent with the plant forecast that was utilized in the cases. The physical work is complete and CAISO relinquished operational control of the Devers-Mirage 115kV system **effective June 1, 201**3. The facilities assumed transferred control for purposes of the Transmission Plant Study include: 220/115kV transformation at Devers and Mirage Substations, the 115kV buses at Devers and Mirage Substation, Farrell, Garnet, Eisenhower, Thornhill, Tamarisk, Santa Rosa, Indian Wells, Concho 115kV substations, and all 115kV lines interconnecting these substations that were under ISO Operational Control.

2. East Kern Wind Resource Area and Future Project (Antelope-Bailey System)

The 2012 Transmission Plant Study maintained the ability to adjust for the Antelope-Bailey 66kV System split as part of the EKWRA project by maintaining the EKWRA Reconfiguration Option in the Study. The EKWRA project was forecast for 2014, therefore it was assumed in the development of the Transmission Plant Study for the 2015 CPUC GRC to be completed. CAISO relinquished operational control of the Antelope-Bailey 66kV system **effective December 15, 2013**, but the EKWRA project's physical work was completed in early 2015. As a result of the EKWRA project the existing Antelope-Bailey will be split into three radial 66kV systems -- one radiating from Bailey, one radiating from Antelope, and a third radiating from a new 500/220/66kV Windhub substation. Post EKWRA, the Bailey-Neenach and Neenach-Antelope 66kV lines will still remain operated in parallel with the CAISO controlled 230kV lines connecting Bailey and Antelope Substations. The following substations and interconnecting 66kV lines were impacted by the EKWRA project:

Substations affected EKWRA include:

2313 Kern River 1	2313	Shift from Mixed to Non-ISO
5079 Wind Hub	5079	Shift from ISO to Mixed
5357 Cummings	5357	Shift from Mixed to Non-ISO

5566 Quartz Hill	5566	Shift from Mixed to Non-ISO
5599 Helijet	5599	Shift from Mixed to Non-ISO
8504 Ritter Ranch	8504	Shift from Mixed to Non-ISO

For purpose of the 2012 Plant Study, the study assumed that EKWRA facilities were under ISO Operational Control during 2012. This study no longer maintains the ISO to Non-ISO reconfiguration option for EKWRA.

3. Current FERC methodology for transformer bank circuit breakers

Pursuant to the Commission's ruling in the Whitewater case (Docket No. ER02-2189), FERC's current methodology classifies all circuit breakers that connect both ISO controlled operating buses as FERC jurisdiction (either in double breaker or breaker and half scheme). SCE has not implemented this methodology for those circuit breakers classified in the original 1998 split of the transmission system into ISO and non-ISO. This study reflects the current single-line diagram classification and the ISO register.

4. Classification of Distribution Plant

In the 2011 Transmission Plant Study, a more thorough review of ISO distribution plant was instituted. At all substations, unless specific distribution voltage facilities could be identified as ISO controlled, no allocation of distribution plant was made. An exception to this general rule is those substation locations where ISO facilities are clearly identifiable by review of the single line diagrams and ISO register, however only distribution plant is recorded at the location. It these cases, distribution plant will be assigned or allocated consistent with the methodology for determining substation investment.

SCHEDULE 10 & 16

IDENTIFICATION OF ISO PROJECTS ABOVE $5M

WORKPAPERS

During the period January 2021 through December 2022, SCE forecasts:

- $634 million in ISO non-incentive network transmission projected to go into rate base (including $411 million in ISO Blanket-Specifics),
- $306 million in FERC incentive rate qualified CWIP expenditures, and
- $1,151 million of CWIP Expenditures projected to go into rate base.

In addition to the numerous but relatively small transmission projects, there are 31 significant transmission projects (each $5 million or greater in ISO-related costs) that are projected to go into rate base during the forecast period January 2021 through December 2022 – 16 Blanket-Specifics (items 1 through 16 below), ten Specific non-incentive projects (items 17, 18, 21, and 24 through 30 below), and five Specific incentive projects (items 19, 20, 22, 23, and 31 below). These projects will increase the reliability of the ISO transmission grid, increase access to new generation resources to serve the ISO market, and/or provide congestion relief. SCE's Formula Protocols, Section 3(a) specifies that SCE will provide work papers detailing specific information regarding its capital forecast.

1. Sylmar Convertor Station: Miscellaneous Capital Maintenance (PIN: 3138)

The Sylmar Converter Station is the southern converter station of the Pacific DC Intertie (PDCI), an electric power transmission line which transmits electricity from the Celilo Converter Station outside The Dalles, Oregon to Sylmar in the northeastern San Fernando Valley region of Los Angeles, California. The

[1] PIN 7820 Substation Physical Security Enhancements Project is split between Blanket Specifics with $0.666 million and Specific non-incentive with another $9.340 million in ISO related capital additions to rate base (*see* WP Schedule 16 – Summary of ISO Cap Expenditures Non-Incentive Projects).

station converts the ±500 kV high voltage direct current (HVDC) coming from the northern converter station Celilo to alternating current (AC) at 60 Hz and 230 kV synchronized with the Los Angeles power grid. The station capacity is 3,100 megawatts and it is jointly owned by Southern California Edison (SCE) and Los Angeles Department of Water and Power (LADWP).

As a 50% joint owner of the PDCI, SCE is contractually obligated to cooperate with LADWP in any capital replacements, additions, and betterments related to the PDCI. LADWP submits its proposed capital project and obtains SCE approval. SCE is responsible to pay for its 50% share of the LADWP's capital costs. The forecasted capital expenditures are for miscellaneous maintenance capital work activities, which include, but not limited to polymer insulators, removal of old electrodes, and bowed towers.

The estimated ISO-related direct capital expenditures that are projected to go into rate base during this period are $11.929 million.

2. Critical Infrastructure Spares (PIN: 3362)

The Spare Transformer Equipment Program (STEP), which is maintained within the FERC Emergency Equipment Program (EEP), is a voluntary transformer sharing program put together to help mitigate the impact of a terrorist event that targets key substation equipment. The EEP maintains an inventory of major substation equipment such as power transformers, circuit breakers, and disconnect switches not readily available in the marketplace for procurement and delivery. To avoid or mitigate potential reductions in reliability, SCE maintains a reserve inventory of such equipment. Inventory levels are prioritized based on in-serviced equipment counts to ensure grid reliability. The STEP focuses on large transformers, as the lead times are well over a year. Any investor-owned, government-owned, or rural electric cooperative electric company in the United States or Canada may participate in the program.

The sharing agreement is triggered by an act of sabotage on a utility substation. The impacted utility must use up its own available resources to mitigate the damage prior to calling on the sharing agreement. Thus, work within this program is reactive and prioritized according to criticality.

The estimated ISO-related direct capital expenditures that are projected to go into rate base during this period are $13.343 million.

3. Transmission Tower Corrosion Program (PIN: 3364)

By 2020, more than 90% of SCE's transmission towers will be at least thirty years old. Thirty years is the average age at which the first signs of tower corrosion, from minor to severe, generally show up. If not identified and addressed, steel loss due to corrosion could lead to structure failure. Based on the severity of corrosion and the location, SCE can perform the following remedies: footing repair, footing replacement/rebuild, sandblasting, tower coating application, corroded steel lattice member replacement, or structure replacement.

SCE's forecast for this activity is based on unit costs and scope estimates from SCE engineering efforts and an internal pilot program, both for assessments and for remediation. Assessment and testing practices will take place on all of SCE's towers to identify further remediation needs. Assessment costs are for bore scope, ultrasonic, and engineering assessments. Bore scope and engineering assessments are performed on transmission towers, while ultrasonic testing is used for tubular steel poles (TSPs). For remediations, SCE has known project scope and anticipated scope that will arise from forthcoming assessments and testing.

SCE will also target high risk structures within SCE's High Fire Risk Areas (HFRA) to assess and remediate transmission towers that pose the highest wildfire risk. To do this, SCE will leverage the various wildfire risk analysis tools SCE has developed in support of its broader wildfire mitigation efforts. Additional

information on these tools and models can be found in SCE's 2020 Wildfire Mitigation Plan (WMP).

The estimated ISO-related direct capital expenditures that are projected to go into rate base during this period are $42.798 million.

4. Transmission Grid-Based Maintenance (PIN: 3364)

SCE has a robust transmission inspection and maintenance program wherein circuits and equipment are inspected on a programmatic basis. Pursuant to CPUC requirements for inspection and maintenance programs, SCE inspects right of ways, conductors, structures, and hardware components for "break/fix" items. Based on these inspections, capital replacements are then identified. Capital replacements may include pole replacement, tower replacement, switch replacement, overhead and underground conduct replacement, underground structures/conduit replacement and pothead/arrestor replacement.

Within this program, SCE workers review the identified equipment issue and classify the resulting work based on a prioritization scale: P1, P2 and P3. The first level of prioritization (P1) requires immediate remediation within 72 hours. The second level (P2) has two classifications: (1) Tier 3: remediation within six months and (2) Tier 2: remediation in 12 months. Additionally, within non-high fire risk areas with a (P2) classification, there can be a 12-month to three-year time frame depending on observations made by field personnel. The third level of prioritization (P3) requires remediation five years from the date the issue is identified.

The estimated ISO-related direct capital expenditures that are projected to go into rate base during this period are $18.307 million.

5. Bulk Power Circuit Breaker Replacement (PIN: 4211)

Bulk power circuit breakers interrupt the flow of electricity through a transmission lines, typically at the 500 kV or 230 kV voltage level. Circuit breakers are essential in preventing equipment damage and public injury when faults occur in their downstream circuits.

The Bulk Power Circuit Breaker Replacement program identifies and replaces bulk power circuit breakers approaching the end of their service lives that contain parts known to be problematic, no longer available, or that can no longer be cost-effectively maintained. Circuit Breaker replacements are identified similarly to transformers using Weibull analysis and the Health Index. The Health Index aides in prioritizing and replacing the correct asset population with the highest risk and consequence of failure. The replacement of bulk power circuit breakers is under FERC jurisdiction and is necessary to proactively replace aging 500 kV and 230 kV circuit breakers at substations to enhance transmission system safety and to improve system reliability. This program also increases the reliability of the ISO transmission grid.

To derive the circuit breakers' health index, SCE utilizes a multiplicative formulation that incorporates information such as inspection data, overstress percentage, Predictive Maintenance Assessment (PMA), circuit breaker analysis (CBA), Oil Circuit Breaker Analysis (OCBA), notification, and field condition that determines the degradation and deterioration of a circuit breaker.

The estimated ISO-related capital expenditures for this program that are projected to go into rate base in the period January 2021 through December 2022 are $9.770 million.

6. Substation Miscellaneous Equipment Additions & Betterment (PIN: 4756)

The Substation Miscellaneous Equipment Additions & Betterment program includes planned capital maintenance that is typically driven by substation inspection and maintenance programs. Activity within this program is driven by the imminent failure of equipment or possible safety issues.

All equipment classes, including the major equipment categories (circuit breakers, transformers, and relays) can be replaced for reactive reasons in this category. These replacements are predominantly like-for-like replacement with limited engineering required.

Equipment that is identified as requiring replacement must be replaced in a timely manner because substation equipment failures may lead to prolonged outages, unsafe operating conditions, or more expensive reactive solutions. This typically includes trench covers, potential transformers, current transformers, batteries, charges, as well as emergent circuit breakers, B-banks and disconnect replacements that are not covered under a specific commodity capital program.

The estimated ISO-related direct capital expenditures for this program that are projected to go into rate base in the period January 2021 through December 2022 are $26.971 million.

7. Bulk Power 500 kV & 230 kV Line Relay Replacement (PIN: 5089)

The Bulk Power 500kV & 230 kV Line Relay Replacement Program and Non-Bulk Substation Relay Replacement Program (SRRP) identify and proactively replace substation protective relays, automation, and control equipment. These programs are driven by equipment obsolescence and compliance requirements (where applicable).

The prioritization of relay replacements is based on several factors: age of the relay; relay obsolescence; level of effort required to maintain a complex and

unique relay model; system criticality; and current protection and compliance requirements. These are discussed further below:

- Age of the relay: Relays that have reached their end of life, or that have become obsolete and no longer serviceable, are targeted for replacement. Relays testing out of tolerance during routine testing that cannot be repaired are also targeted by the program. Another aspect of older relays is that they may not be recording events. The replacement of these relays helps with data recording when an event occurs.
- Relay obsolescence: Another driver is the need to have more functionality in a relay such as added protection capabilities, event recording and alarming for failure. SCE may want to replace an electromechanical relay with a digital relay for added functions that are included with a digital relay.
- Level of required effort: There are some relays that require excessive resources to maintain. It may not be cost effective to keep maintaining such relays due to the complexity and uniqueness of the relay and a need for unique, specified knowledge to maintain them.
- System criticality: The criticality of the system that the relay protects is taken into consideration. For example, SCE considers the impacts should a relay fail or have a mis-operation. In many cases, SCE will proactively replace an older relay in favor of reacting to an imminent failure.
- Current protection and compliance requirements: The current relay may not be capable of new compliance requirements or protection needs such as relay coordination parameters.

The estimated ISO-related direct capital expenditures for this program that are projected to go into rate base in the period January 2021 through December 2022 are $14.508 million.

8. Phasor Measurement System Installations (Disturbance Monitoring) (PIN: 6446)

North American Electric Reliability Corporation (NERC) requires each Transmission Owner (TO) to install Disturbance Monitoring Equipment (DME) and report on disturbance data to facilitate analysis of events and verify system models. Each TO must have adequate data available to facilitate analysis of Bulk Electric System (BES) disturbances. SCE installs Digital Fault Recorders (DFR) and Phasor Measurement Unit (PMU) devices for post event analysis, situational awareness, and for use with mis-operation investigations. PMUs are installed in all 500kV substations, select 230 kV substations that have a high load flow capacity, and at some neighboring utilities and generation interties. PMUs capture real time power system data and DFRs capture the sequence of events on power system disturbances for post event analysis. The DFR or PMU projects are typically the same. PMU is an added capability in the DFR or may be a separate device all together.

TOs must be compliant with NERC Protection and Control (PRC) 002-2 by July 1, 2022. NERC PRC-002-2 provides requirements and measurements for TOs with regards to identification, notification, and evaluation of any type of disturbance on their system. SCE meets the compliance requirements of PRC-002-2 through installation of DFRs and PMUs.

Replacement of an obsolete PMU is accomplished through a combination of infrastructure replacement work and bundled capital projects. SCE takes advantage of substation construction projects to upgrade PMUs when possible, as efficiencies can be realized by coupling the PMU installation with other capital work. PMU upgrades are prioritized based on obsolescence of hardware, while ensuring that SCE's PRC-002-2 sites are upgraded in time to meet the compliance deadline. SCE also prioritizes requests from its Grid Control Center (GCC) for upgrades to ensure GCC personnel have the necessary situational awareness.

The estimated ISO-related direct capital expenditures for this program that are projected to go into rate base in the period January 2021 through December 2022 are $7.578 million

9. Transmission Line Rating Remediation (Exempt from Licensing) (PIN: 7298)

SCE conducted a rating assessment of its CAISO controlled and 115 kV radial lines built before 2005 to identify spans potentially not meeting CPUC's General Order (GO) 95 clearance requirements under certain operating and atmospheric conditions. SCE committed to NERC and Western Electricity Coordinating Council (WECC) to remediate all identified potential clearance issues for the CAISO controlled facilities by 2025 and the 115 kV radial lines by 2030. While not its original intent, to the extent this remediation program reduces risk related to transmission line discrepancies in High Fire Risk Areas (HFRA), it has important secondary wildfire risk mitigation benefits.

A Light Detection and Ranging (LiDAR) study was conducted to identify transmission lines potentially in violation of GO 95 Table 1,[2] which included building industry standard Power Line Systems-Computer Aided Design and Drafting (PLS-CADD) three-dimensional models to analyze each line for potential clearance discrepancies. Based on the results of the LiDAR study, SCE prioritized the transmission line discrepancies based on criteria such as line sag when operating at or above 130 degrees Fahrenheit and potential risk to public safety and system reliability based on location of span, terrain, encroachment type, and extent of deviation from standards.

SCE has taken a programmatic approach to the remediation work by utilizing new technologies and construction methods to minimize overall project impacts. Aligning scope with other programs and initiatives minimizes redundant

[2] Available at http://www.cpuc.ca.gov/gos/GO95/go_95_table_1.html

work, outage impacts, and resource constraints. Initially, the program prioritized discrepancies into six levels and the focus was to remediate in order of highest priority. A discrepancy is any condition found in the field requiring remediation to meet GO 95 requirements during peak loading conditions. Currently, all discrepancies are evaluated on an entire circuit basis to allow for a holistic and effective remediation strategy. There are two major categories of discrepancies SCE is mitigating: (1) Bulk Transmission – 500 kV and 230 kV; and (2) Non-Bulk or Sub-transmission – 161 kV, 115 kV, 66 kV, and 55 kV. The following factors are considered when reviewing the discrepancies:

- Geographic proximity and bundling of projects for construction efficiencies.
- Government land or land agency overlap.
- Permitting similarities and schedule impacts.
- Engineering design.
- Construction methods.
- Outage opportunities or restrictions with other TLRR and SCE projects.
- Material and procurement efficiency.
- Potential of remediating by working on a lower voltage; and
- Aligning scope with other programs and initiatives to minimize redundant work, outage impacts and resource constraints.

Each project is also reviewed under CPUC GO 131-D, which defines the rules relating to the planning and construction of electric facilities. Some projects fall under the exemptions listed in GO 131-D Section III.B.1 while others will require full permitting and become licensing projects. The following corrective actions have been identified for majority of the discrepancies:

- Reconductor.
- Structure replacement.
- Structure raises.

- Retensioning.
- Reframing.
- Adding an interset structure.
- Lowering or relocating sub-transmission or distribution.
- Grading; or
- Lowering/removing object (such as a light pole).

Total forecast of TLRR (exempt from licensing) direct capital expenditures between 2021 and 2022 is $215.409 million and estimated ISO-related direct capital expenditures that are projected to go into rate base during this period are $149.388 million.

10. Seismic Mitigations for Transmission Assets (PIN: 7392)

The Seismic Program, consolidated under Business Resiliency, is part of a larger, mostly CPUC funded effort beyond just the FERC dollar request. The broader seismic program centralizes and coordinates across organizational units to assess and perform mitigations as identified to increase safety, infrastructure reliability and maintain regulatory requirements. The primary objectives of the Seismic Assessment and Mitigation Program are to: (1) assess SCE's electric infrastructure (transmission lines and substations), non-electric facilities, generation, and telecom infrastructure and identify what seismic mitigations are needed, and (2) mitigate risks by making the necessary retrofits and improvements in order to increase reliability and reduce the risk of harm to workers, customers and communities due to a moderate or major earthquake.

Within this Formula Rate Annual Update, SCE addresses the seismic mitigation activities pertaining to SCE's transmission system assets, which include both transmission line infrastructure and substation assets. Examples of mitigations for these assets include bracing and anchoring electrical equipment in substations, improving conductor slack, structural work to reinforce building wall

to roof connections, and replacing aged equipment with modern equipment designed to withstand greater levels of seismic activity. Other work includes more detailed assessments of significant transmission tower corridors along the earthquake faults to determine possible landslide risk and mitigate said risk accordingly to ensure reliability.

SCE conducts hazard and vulnerability assessments on its infrastructure in order to (1) understand the seismic exposure and impacts of seismic events, (2) assess the functionality and stability of the infrastructure if a seismic event occurred, and (3) identify applicable design standards and codes. Assessments utilize a combination of site surveys, seismic modeling, and geographic information systems.

Seismic mitigations are prioritized with a focus on keeping people safe and minimizing interruptions in electric service. Projects with the highest safety, reliability, and compliance impact will be executed first. This includes populated buildings and transmission, distribution, generation, and telecom infrastructure critical to maintaining business continuity and operational reliability. As mentioned in the criteria above, reviewing the data against the United States Geological Survey's probabilistic scenarios informs the prioritization of transmission infrastructure in terms of imminent failure should moderate to high seismic activity occur. In addition to the prioritization method used, some projects may be escalated to bundle work for efficiency purposes and to minimize outages. Projects related to high-hazards dams with pending FERC reviews will be prioritized accordingly.

Based on the scope and costs to mitigate both transmission towers and lines/corridors and transmission substation structures, SCE forecasts ISO-related capital expenditures of $27.321 million to perform corresponding mitigations for SCE's transmission assets in the period January 2021 through December 2022.

11. Substation Fence/Gate (Cu Theft) (PIN: 7573)

Substation Fence/Gate (also known as Security Fence and Lights Upgrade) program is focused on deployment of physical security improvements at substations to mitigate the impact on service to customers resulting from theft, vandalism, and other intrusions by upgrading security fence and lights to latest security standards.

The need for ongoing improvement of physical security at SCE substations is driven by their varying levels of impact on electrical systems if a security breach occurs, and by reported incidents of theft, vandalism, and other intrusions. The security monitoring and deterrence deficiencies, and the remote location of many of the 230/66 kV A-Bank substations, increase the potential for unauthorized entry and malicious activity. Improving the physical protection systems at SCE substations continues to be an important initiative to safeguard key systems, information, and facilities, mitigate threats to worker safety, and support reliable delivery of electricity and continuity of business operations.

The estimated ISO-related capital expenditures for this program that are projected to go into rate base in the period January 2021 through December 2022 are $6.927 million.

12. Protection of Grid Infrastructure Assets (PIN: 7949)

The Protection of Grid Infrastructure Assets program (previously known as the Physical Security Systems – Electric Facilities Blanket) deploys and standardizes new security systems at SCE and corrects identified deficiencies with access control and monitoring of SCE entry/exit points, critical areas, and critical assets. Each year, Corporate Security reviews emerging threats and security vulnerabilities to develop a prioritized list of electrical facilities designated for security system installations or security systems refresh and enhancements for the next year. Electrical facilities requiring a new security system or security system

component will undergo a structured process to identify specific physical security needs and to develop a system design incorporating SCE security standards, installation and integration with the Edison Security Operations Center (ESOC), and personnel training and awareness. Each deployed security system will be standardized to improve management of replacement assets, maintenance costs, and refresh cycles of security technology components.

To maintain the operation of existing alarm, access control, and security systems at SCE, Corporate Security will first identify which facilities have security systems that are non-operational or are operating at a degraded performance level. Corporate Security will evaluate each security system to be enhanced or refreshed considering current operations, how the site is being utilized, types of assets requiring protection, access controls for population and types of persons at the site, and the required protections associated with the refresh/enhancement.

Completing work needed for NERC CIP-014 Tier 1 substation and associated command centers/switching centers critical asset protection is a priority for 2019 and 2020. NERC CIP-014 work requires many of the same resources as the Protection of Grid Infrastructure Assets program. Consequently, a low level of work for this program was scheduled for prior years. From 2019 to 2023, the focus will be on making security enhancements to control/command centers, major/medium/minor substation enhancement projects, and system replacements and renewals.

The estimated ISO-related capital expenditures for this program that are projected to go into rate base in the period January 2021 through December 2022 are $16.971 million.

13. Substation Facility Capital Maintenance (PIN: 7637)

SCE's Substation Capital Maintenance Program seeks to preserve the value of SCE's substation buildings, equipment, and grounds, making them as safe and productive as reasonably possible and proper asset management requires a proactive capital maintenance program to repair or replace building systems and components that are damaged, degraded, non-operational, non-compliant, or have reached their end of useful life.

SCE uses Asset Management Methodology, to prioritize capital projects and program expenditures to support SCE's objectives to provide safe, reliable, and affordable electricity to its customers. One of the three main influencing factors under Asset Management Methodology is Facility Condition Index (FCI) that assesses conditions (e.g., age and wear of the building and its systems) and compares the cost to improve them against the cost to replace the building or site. The FCI score, expressed as a percentage, is the ratio of the cost of correcting identified deficiencies to the replacement cost for the facility in whole. A low FCI score is more desirable than a high one. To be more specific, the FCI Score of 0-5.0% translates into Good; 5.1%-10.0% into Fair; 10.1%-29.9% into Poor; and >30% into Critical overall condition characterization. SCE's portfolio FCI score has improved from 23% (Poor condition) in 2013 to 16% in 2016 - improved, but still in Poor condition and, therefore require ongoing capital maintenance. For the 2015 SCE FCI Report, please refer to the attachment. It would not be prudent to replace all aged facilities, for a variety of reasons. FCI is one indicator used by SCE in prioritizing investments. Other conditions and influencing factors must also be considered, as discussed below.

Asset Priority Index (API) rates the relative importance of a facility among the network of facilities required to serve SCE's customer base. A facility's API is used to define a facility's importance in meeting SCE's strategic business intent

and operational performance. Periodically, SCE's Corporate Real Estate (CRE) department consults with SCE leadership from across OUs to rank SCE's facilities. A site is prioritized by its importance and criticality to delivering safe and reliable services. A lower API ranking (i.e., number) indicates a higher priority. An API ranking of three shows a highly needed and important facility, as compared to an API ranking of 98, which would be a non-essential asset. SCE deprioritizes investments in non-essential buildings, such as a general non-electric tool shed, with a Poor FCI condition and a high API ranking. Conversely, investments are prioritized for the most significant facilities, which have comparatively high operational purpose and, therefore, a low API rank. Last, where the FCI and API focus on the condition and criticality of a facility, SCE considers a facility's fitness for purpose, as a way to integrate evolving business conditions, and the ability of a facility to support these changes, into portfolio planning and capital prioritization. This factor considers the unique conditions of a facility and its ability to support current and future operations, such as:

- Changing work methods or equipment (e.g., T&D vehicles or IT data processing machines) and limitations or deficiencies of the current building infrastructure, building design, and site design, which can cause overburdened building systems, non-compliance with current building codes, or poor service reliability conditions.
- Regulations, such as building codes that cannot be achieved in old building or site designs, that pre-dated such regulations, and which conditions have become an increasing concern for safety and operational reliability.
- The current capacity and utilization of buildings or sites (e.g., of parking, office spaces, etc.) versus the forecast growth or contraction and the ability for the facility, to best support the change.

- The ability to consolidate or co-locate functions or uses, to continue to use facilities to their highest and best use or to promote better collaborative work environments.

The forecast for substation capital maintenance is a combination of historical expenditures and a zero-based budget, considering fluctuations in the maintenance activity. The forecasted level of spend is needed for proper preventative maintenance to mitigate negative impacts from the prior delays, including costly repairs and replacements.

The estimated ISO-related capital expenditures for this program that are projected to go into rate base in the period January 2021 through December 2022 are $11.689 million.

14. Substation Switchrack Rebuilds (PIN: 7713)

Substation Switchrack Rebuilds activity captures the capital expenditures related to rebuilding existing substation racks based on conditions found in the field, as well as through various analyses including structural and seismic analysis. A substation switchrack is the skeletal/structural system used to support substation assets such as circuit breakers, disconnects, and conductors. Substation structures degrade over time and need to be replaced and/or upgraded. The switchracks/structure needs are initially identified at the scoping job walk, typically driven by the circuit breaker and transformer replacement, and in some cases disconnect switch replacements.

At the scoping job walk the field personnel (operations, construction, maintenance, etc.) and engineering personnel evaluate and determine the project scope. These workers evaluate the condition of foundations, equipment, structures, and working areas/to identify the need to potentially perform a switchrack rebuild project. Prior to pursuing a rebuild project, SCE also considers other potential solutions including, but not limited to, deferring a project, modifying a switchrack

(i.e., structural modification in place or additional grading beneath a switchrack structure), and/or increasing maintenance activity for the circuit breakers and/or transformers.

Switchrack rebuild projects result from the need to replace substation circuit breaker. SCE estimates the costs for each project based on the unique characteristics of each project, and not by using an average cost per project approach. This is because, unlike like-for like replacements of circuit breakers and transformers, switchrack rebuild projects can vary and have unique site-specific challenges, including voltage class, geographic location, property size and footprint, non-SCE original construction, modification of construction standards, local city regulations, space constraints for construction, maintaining service during construction, etc. As a result, using an average cost per project forecast is not meaningful.

The estimated ISO-related capital expenditures for this program that are projected to go into rate base in the period January 2021 through December 2022 are $11.800 million.

15. Transmission Maintenance Planned - Overhead Conductor (PIN: 7890)

Overhead conductor analytics and poor performing circuits are used to identify interruptions and prioritize overhead conductors to be replaced. Generally, as a matter of practice, smaller, more brittle conductors are targeted for replacement. Approximately 2 miles of reconductoring is planned to be applied to three 230 kV transmission circuits in Metro West Grid during 2021-2022 period. In addition, shield wire will be replaced for the Rector – Springville 230 kV transmission line in San Joaquin Grid during this period.

The estimated ISO-related capital expenditures for this program that are projected to go into rate base in the period January 2021 through December 2022 are $9.750 million.

16. West of Colorado River CRAS Inland/Devers Extension (PIN: 8284)

As part of the Queue Cluster (QC) 10 studies, generation projects (Q1402 Atlas Solar, Q1403 Harquahala Flats, Q1405 Athos Power Plant, Q1406 Mesaville Solar and Q1407 Mountainview Generating Station Pmax Increase) seeking interconnection to the Eastern Area triggered the need for the West of Colorado River CRAS Inland/Devers Extension. This CRAS monitors multiple 230 kV and 500 kV lines in the West of Devers Area. The estimated ISO-related capital expenditures for this program that are projected to go into rate base in the period January 2021 through December 2022 are $6.764 million.

17. LADWP AC/DC Filter Replacement (PIN: 3138)

The AC/DC Filter Replacement is a capital improvement project consisting of engineering, materials procurement, installation of four AC & two DC Filter Banks, and upgrading the HVDC Control and Protection at Sylmar Converter Station (SCS) East. The project scope is to upgrade the existing AC/DC filter banks along with control and protection system for the Pacific DC Intertie (PDCI) at Sylmar Converter Station. This project is constructed by LADWP and a contractor with a total estimated cost of $224 million. The construction of four AC filter banks and two DC filter banks along with demolition of four existing AC filter banks and two existing DC filter banks is performed by LADWP. The design, engineering, equipment procurement, installation of control & protection system, and commissioning the entire project is the contractor's responsibility with the following task:

- Third party consultant shall be employed to perform technical design review and owner's representation.

- All four existing AC filter banks shall be demolished and disposed from the SCS East and West. The new AC filter banks shall be installed exclusively at SCE East.
- The two existing DC filter banks shall be demolished and disposed from the SCE West. The new DC filter banks shall be installed at SCE East.
- The new AC/DC filters shall be seismically qualified as required per LADWP specifications.
- The existing DC line connections between the converters on the SCE East and the DC filters on the SCS West shall be partially removed.
- Two additional shunt reactors shall be installed to minimize the reactive interchange between AC and DC systems.
- The hardware and software of the HVDC control systems shall be upgrades to the latest version of control, monitoring, and protection system for the bi-pole, monopole, AC/DC filters interface, and associated auxiliary equipment.
- The newly commissioned transmission and control system at SCE East shall be in compliance with the last LADWP and NERC/FERC cyber security requirements.
- The new redundant AC/DC voltage dividers, filter bus ground switches, filter sub bank breaker and disconnects, and protections independent of the control system shall be included for the AC/DC filters.
- New Server on Gas Monitoring units shall be installed and commissioned on the existing Convertor Transformers for online monitoring.
- The new AC/DC filters and associated equipment shall be integrated, tested, commissioned, and placed in-service.
- Outage duration for testing and commissioning shall be minimized.
- All old filter bank equipment shall be decommissioned.

- The two existing telecommunications buildings at the SCS West shall remain at current location. No changes shall be made to them as they house PDCI participant utility companies' equipment.

In additions, LADWP will perform the following:

- Development of specifications, request for proposals, bids review & selection, contract negotiations, and contract award.
- Engineering support and project management.
- Engineering will issue Construction Work Packages (CWPs) in accordance with Contractor's design and specifications.
- Performing all civil and electrical construction for the AC/DC filter banks.
- Performing the design of overhead transmission lines and modifications to existing structures at Sylmar.
- Quality assurance, maintenance support, and construction inspection.
- Relocating 720 feet of a 30-inch water trunk-line under the project site.
- Providing around a clock security personnel during construction.

The project was placed in service in June 2020 with remaining capital expenditures of $5.298 million, which represents SCE's 50% share of the project. All the total project cost is projected to go into rate base during this period.

18. September Wildfires CEMA Transmission Restoration and Erosion Control (PIN: 4057)

The Creek fire started on September 4, 2020 in Fresno County and burned more than 379 thousand acres. Once it was safe to do so, SCE personnel inspected the area to assess the damage and began restoration efforts. The Creek fire destroyed several of SCE's 230 kV Transmission structures and lines under CAISO control. SCE activated the Incident Support Team on September 14, 2020 in response to fire restoration activity in the service territory. Damaged Assessment Teams

identified 3 Transmission towers that needed to be replaced and 16 Transmission towers needed repairs. The teams also identified 5 miles of overhead (OH) conductors to be replaced and approximately 10 spans of OH conductor needing repairs. There were approximately 30 towers that needed aerial washing as well.

The Creek fire impacted SCE's Transmission, Distribution, Telecom, and Hydro facilities in the area, including the critical Big Creek facility. It was critical for SCE to begin restoration and quickly restore power to impacted customers and the grid. The decision was to rebuild 5 miles of Transmission OH conductor spans, replaced 3 towers, and repaired to several towers as well as other essential material in-line with SCE's updated standards for High Fire Risk areas for assets that were damaged from the fire. In replacing the damaged OH conductor spans, SCE also had to replace the adjoining OH conductor too, which resulted in slightly more miles of OH conductor spans.

The estimated ISO-related capital expenditures for this program that are projected to go into rate base in the period January 2021 through December 2022 are $8.691 million.

19. Riverside Transmission Reliability Project (PIN: 5450)

The Riverside Transmission Reliability Project ("RTRP") is a joint project between SCE and Riverside Public Utilities ("RPU"), the municipal utility department of the City of Riverside. While RPU would be responsible for constructing some of the project's facilities within Riverside, SCE's portion of the project consists of constructing upgrades to its system, including a new 230-kV Substation; certain interconnection and telecommunication facilities and transmission lines in the cities of Riverside, Jurupa Valley and Norco and in portions of unincorporated Riverside County. The purpose of the project is to provide RPU and its customers with adequate transmission capacity to serve

existing and projected load, to provide for long-term system capacity for load growth, and to provide needed system reliability.

In October 2018, the CPUC issued an environmental report that identified a new route alternative, as the environmentally preferred project and proposed an additional underground section of the proposed 230-kV power line. In March 2020, the alternative project with revised scope and an updated cost of $584 million was approved by CPUC. The scheduled in-service date of the project has been extended from 2024 to 2026.

In June 2020, SCE filed a petition with the FERC seeking authorization to recover SCE's prudently incurred costs if the project is cancelled or abandoned for reasons beyond SCE's control, and inclusion of 100% of the project's network transmission Construction Work In Progress in transmission rate base during the construction period. In September 2020, the FERC issued orders granting SCE's requests. SCE is allowed to seek recovery of 100% of all prudently incurred costs after September 17, 2020 and 50% of prudently incurred costs prior to that date.

The estimated ISO-related capital expenditures for acquiring rights of way (ROW) that are projected to go into rate base in the period January 2021 through December 2022 are $47.774 million.

20. West of Devers (PIN: 6420)

The West of Devers Upgrade Project (WODUP) consists of upgrading and reconfiguring approximately 48 miles of existing 230 kV transmission lines between the Devers, El Casco, Vista, and San Bernardino substations, increasing the power transfer capabilities. The WODUP is needed to integrate planned renewable generation resources, comply with executed Large Generator Interconnection Agreements (LGIAs) and signed Power Purchase Agreements (PPAs), comply with NERC and WECC transmission reliability planning criteria

and facilitate compliance with California's renewable portfolio standards (RPS) goals.

In August 2016, the CPUC approved the construction of the WODUP. As a result of the delay in receipt of the WODUP's approval from the CPUC, SCE deferred the forecasted timing of project capital expenditures. Office of Ratepayer Advocates (ORA) filed an Application for Rehearing in September 2016 stating that the August 2016 decision failed to follow the California Environmental Quality Act (CEQA) when it approved the WODUP and should have approved an alternative project with an amended scope. In March 2017, the CPUC issued a decision denying ORA's September 2016 Application for Rehearing. This action confirmed SCE's proposed project. In December 2017, SCE awarded the competitive bid for transmission construction, which resulted in a decrease to the expected cost of the WODUP from $1.075 billion to $848 million.

The projected in-service date of WODUP is May 2021 with an estimated total project cost of $740 million in direct capital expenditures, which includes not only non-jurisdictional cost, but also jurisdictional cost beyond the forecast period. Th estimated ISO-related direct capital expenditures of $658.293 million are projected to be placed in plant in service or go into rate base in the period January 2021 through December 2022.

21. Casa Diablo IV Project Interconnection (PIN: 7227)

This project is needed to interconnect the Casa Diablo IV Project to SCE's Casa Diablo 115/33 kV Substation. The scope of the project includes the Casa Diablo IV interconnection in the Bishop Special Protection System (SPS) under the single outage of the Control-Coso-Haiwee-Inyokern 115 kV transmission line, the single outage of the Control-Haiwee-Inyokern 115 kV line, and the simultaneous outage of the Control-Coso-Haiwee-Inyokern and Control-Haiwee-Inyokern 115 kV

lines. Two N60 relays will be also installed at Control 115/55 kV Substation as part of project scope.

The proposed operating date for the specific project is July 2021 and total ISO related direct capital expenditures that are projected to go into rate base during this period are $12.610 million.

22. Eldorado-Lugo-Mohave (ELM) Upgrade (PIN: 7546)

CAISO approved the Lugo-Eldorado series capacitor and terminal equipment upgrade in its 2012-2013 Transmission Planning Process (TPP) and the Lugo-Mohave series capacitor and terminal equipment upgrade in its 2013-2014 TPP as policy-driven upgrades to relieve deliverability constraints in order to support achievement of California's renewable goals. It will increase power flow through existing transmission lines from Nevada to Southern California and provides renewable integration, deliverability, and reliability benefits. CAISO identified reliability benefits of the project in that it relieves overloads on certain 500kV facilities in the neighboring LADWP's transmission system.

The ELM project would modify SCE's existing Eldorado, Lugo, and Mohave electrical substations to accommodate the increased current flow from Nevada to Southern California; increase the power flow through the existing Eldorado-Lugo, Eldorado-Mohave, and Lugo-Mohave 500 kV transmission lines for the purpose of increasing the amount of power delivered from California's Ivanpah Valley, Nevada, and Arizona to the Electrical Needs Area (ENA) through the SCE system in an effort to meet requirements associated with the California Renewables Portfolio Standard (RPS) by constructing two new 500 kV mid-line series capacitors (i.e., the proposed Newberry Springs Series Capacitor and Ludlow Series Capacitor) and associated equipment; raise transmission tower heights to meet ground clearance requirements; and install communication wire on

SCE's transmission lines to allow for communication between existing SCE substations.

SCE has proposed an expedited schedule and a non-standard review process with the regulatory permitting agencies to meet the current in-service date. During September 2017, SCE awarded the competitive bid for the project which resulted in a decrease to the expected capital forecast for the project.

On May 2, 2018, SCE filed an application for a Permit to Construct (PTC) authorizing SCE to construct electrical facilities known as the Eldorado-Lugo-Mohave Series Capacitor Project.

On January 9, 2019, the CPUC directed SCE to file an amended application for a Certificate of Public Convenience and Necessity (CPCN). SCE submitted its amended application for a CPCN on April 19, 2019. The licensing process to file CPCN delayed the projected construction start date to third quarter of 2020.

Public Advocates Office (PAO) protest resulted in CPUC ruling for an amended CPCN application to be filed (note SCE filed a PTC in May 2018, and then the amended CPCN application April 2019) and this licensing delay deferred construction start date to Q4 2020. Final Decision was voted at CPUC's August 27 Business Meeting, approving the project to move forward. BLM Nevada authorized SCE to proceed with construction under O&M condition until ROW Grant is renewed. Eldorado and Mohave construction started on November 2, 2020. CPUC issued Notice to Proceed (NTP) #1 authorizing work to start at Lugo Substation on Jan 4, 2021. The 60-Day Department of Interior Temporary Suspension of Delegated Authority (SO3395) has been lifted for BLM CA and NPS. BLM CA issued NTP allowing construction at Newberry Springs to commence. BLM Nevada issued ROW Grant Renewal for the 500kV TL.

The proposed operating date for the specific project is June 2022 with an estimated total project cost of $247 million in direct capital expenditures, which includes not only non-jurisdictional cost, but also jurisdictional cost beyond the

forecast period. Total ISO related direct capital expenditures that are projected to be placed in plant in service or go into rate base during this period are $197.517 million.

23. Mesa Substation (PIN: 7555)

The Mesa Substation Project consists of replacing the existing 230/66/16 kV Mesa Substation with a new 500/230/66/16 kV substation. The Mesa Substation Project would address reliability concerns by providing additional transmission import capability, allowing greater flexibility in the siting of new generation, and reducing the total amount of new generation required to meet local reliability needs in the Western Los Angeles Basin area. In February 2017, the CPUC issued a final decision approving the Project largely consistent with SCE's proposal and rejected alternative project configurations proposed by CPUC staff.

In October 2017, SCE awarded the competitive bid for the new 230 kV portion of substation construction. SCE updated the expected cost of the Project from $608 million to $646 million due to schedule delays and scope changes. Construction of the new 500/230/66/16 kV substation and demolition of the existing 230/66/16 kV substation would occur in phases. Phase 1 would consist of grading and initial site development on the western portion of the project site. Phase 2 would consist of construction of the first half of the new Mesa Substation. During Phase 1 and 2, the existing substation on the eastern portion of the site would remain operational to maintain electrical service to customers during construction. Phase 3 would consist of demolition of the existing 220/66/16 kV substation and construction of the second half of the new substation on the eastern portion of the site. Phase 4 (500 kV substation construction) Request for Proposal (RFP) was issued December 2019 and bids were received February 28, 2020. A winning bid was awarded in May 2020 and SCE’s project team is working to determine the logical start date for Phase 4 construction.

The projected operating date for the project is March 2022 with an estimated total project cost of $641 million in direct capital expenditures, which includes not only non-jurisdictional cost, but also jurisdictional cost beyond the forecast period. The estimated ISO-related direct capital expenditures of $244.109 million in projected closing to plant in-service or go into rate base in the period January 2021 through December 2022.

24. Magunden-Springville No.1 & 2 Tower Replacement ("Lake Success Towers in Water") (PIN: 7558)

The purpose of Lake Success Project is to develop a long-term solution to reroute Magunden-Springville 230kV No. 1 and 2 lines that cross Lake Success to address the following issues:

- Tower structure integrity –Since 1963, US Army Core of Engineers (USACE) has had the right to inundate the reservoir and SCE's T/L ROW with water at or below elevation 660 feet.
- Lake's water level increase –Lower Tule River Irrigation District (LTRID) & USACE's current plan to increase the water level at Lake Success to 662.5 feet would cause additional area of SCE right-of-way to be submerged.
- GO 95 clearance discrepancies – GO 95 compliance challenges regarding phase to water clearance. SCE Conductor clearance for transmission structures now requires 49 feet over water.
- Public safety –Lake Success visitors have historically been observed anchoring boats to, and diving from SCE towers.

The projected operating date for the project is July 2022 with an estimated total project cost of $21.096 million in direct capital expenditures, which includes jurisdictional cost beyond the forecast period. The estimated ISO-related capital

expenditures for this program that are projected to go into rate base in the period January 2021 through December 2022 are $14.237 million.

25. Lugo-Victorville 500 kV T/L Special Protection System ("SPS") (PIN: 7763)

The purpose of this project is to prevent overloads on the jointly owned Lugo-Victorville 500 kV transmission line. This SPS trips the Transition Cluster ("TC") generation projects for the N-1 loss of the Eldorado-Lugo 500 kV line and the N-2 loss of the Eldorado-Lugo and Lugo-Mohave 500 kV transmission lines. This project was approved by the CAISO in an executed LGIA. The proposed operating date is July 2022 and estimated ISO-related direct capital expenditures that are projected to go into rate base are during this period $12.642 million.

26. Substation Physical Security Enhancements (PIN: 7820)

In 2014, NERC developed physical security regulations to require utilities to protect critical substations from attack that could cause widespread outages in the bulk electrical system. NERC CIP-014 addresses greater protection of key physical assets at the most critical BES facilities to reduce the overall vulnerability of these facilities to physical attacks.

The stated purpose of the NERC CIP-014 Standard and its requirements is to identify and protect transmission stations and substations, and their associated primary control centers, which if rendered inoperable or damaged because of a physical attack, could cause widespread instability, uncontrolled separation, or cascading within an interconnection.

The NERC CIP-014 Standard for physical security requires a high-level threat and vulnerability analysis to uncover potential threats and weaknesses, and the corresponding impacts should an attack take place on a critical grid connection. The NERC CIP-014 Standard provides a structured framework whereby utilities must comply with the six requirements described in table below.

Table 2
NERC CIP-014 Requirement Description

Requirement	Description/Goal
R1	Applicability and Risk Assessments – Initial assessment and identification of critical facilities
R2	Unaffiliated Review – Independent review of initial (R1) risk assessment
R3	Control Center Notification – Coordination between operator and owner
R4	Threat and Vulnerability Assessment – Evaluation of potential threats/vulnerabilities of a physical attack
R5	Security Plan – Development and implementation of a physical security plan
R6	Unaffiliated Review – Third party assessment of R4 and R5

Under Requirements R1 through R3, SCE must perform an initial risk assessment (R1) to identify critical assets which, if compromised or attacked, could lead to one of the events described above, and those results must be reviewed by an independent third party (R2) and then communicated to SCE's control/switching centers (R3). Requirements R4 through R6 require a tailored assessment and evaluation of potential threats and vulnerabilities to each of the identified critical assets (R4), and then development and implementation of a plan (R5), corroborated by an independent third party (R6), to protect those identified assets from physical threats. Corporate Security is responsible for completing R4 through R6 requirements.

The drivers for the NERC CIP-014 project are to:

- Reduce the overall susceptibility of the power grid to physical attacks.
- Protect transmission substations and associated primary control centers.
- Deploy a multi-layered approach to detect, deter, delay, respond and monitor potential intrusions and attacks with the creation of uniform standards, processes, and procedures.
- Demonstrate steps to address physical security risk and vulnerabilities related to the reliable operation of the BES.

On April 16, 2013, attackers severed six underground fiber-optic lines at PG&E's Metcalf substation in San Jose before firing more than 100 rounds of ammunition at substation equipment using high-powered rifles. The apparent acts of sabotage did not result in power outages. However, the attacks disabled large transformers (which took 27 days to repair) and some 911 and landline telephone services, causing more than $15 million in damages, and highlighting the vulnerability of the electric system to this type of action. There is widespread agreement among state and local officials and utility operators that critical substations are vulnerable to attack from both personally-motivated attackers and terrorists, and that the potential effects of such an attack on the U.S. economy and the well-being of those living in the affected areas could be devastating.

An attack has a high probability of disrupting the electric grid despite the high level of grid resiliency. In the last 10 years, international terrorists have attacked over 500 substations overseas. In 2002, two Al-Qaeda sympathizers were indicted for conspiring to bomb substations and a National Guard armory in southern Florida. In 2014, three militia members were arrested in Georgia buying improvised explosive devices (IED) to target critical infrastructure, including the power grid. In the last five years, there have been over 30 reported incidents of persons firing weapons at substations or control buildings, and six improvised explosive devices have been used against a substation or control building. While none resulted in electrical grid disruption, they highlight the inherent vulnerability of these facilities and the need for protective measures commensurate to the criticality and the potential risk.

The estimated ISO-related portion is $10.006 million that will go into rate base in the period January 2021 through December 2022.

27. Physical Security Enhancement Projects (Tiers 2 & 3) (PIN: 8042)

Project objective is to security measures at most critical facilities based on the criticality of need and the potential impact of a security breach. The Tier Program supports the efforts of providing safe and reliable service to our customers by improving the protection of critical assets, buildings, and people around electric facilities. Deployment of security systems at these facilities is prioritized based on operational need and evolving threats such as theft, vandalism, and security breaches. Security enhancements include perimeter intrusion detection, integrated access control, alarm management with ESOC and video surveillance. This program implements a set of standards to ensure fiscally responsible decision making process directly tied to risk mitigation.

Although work associated with the Tier Program was scheduled to begin in 2018, SCE was able to test new and more cost-effective security systems after the filing of the 2018 General Rate Case (GRC), prompting the rescheduling of implementation to 2019. The substation tiers are:

- Tier 1 – Substations identified in CIP-014 Risk Assessment (including Pre-CIP-014 Pilot Sites).
- Tier 2 – 500 kV with five or more Network Connections or load > 1,000 MW or Generation > 1,200 MW.
- Tier 3 – 500 kV with five or more Network Connections OR 220 kV with eight Network Connections, OR 220 kV and load > 1,000 MW or Generation > 1,200 MW.
- Tier 4 – Additional A & AA-bank substations identified by SCE AND Substations not identified in Tiers 1 -3.

The estimated ISO-related capital expenditures for this program that are projected to go into rate base in the period January 2021 through December 2022 are $14.555 million.

28. Annual Transmission Reliability Assessment 2016 - Protection Upgrades (PIN: 8077)

Install protection upgrades to comply with NERC TPL 001-4 (Transmission System Planning Performance Requirements), which went into effect January 1, 2016. NERC Transmission Planning Standards 001-4 requires mitigations for the TPL violations and persistent faults identified as part of Annual Transmission Reliability Assessment (ATRA) 2016.

In coordination with CAISO's TPP, SCE performs an ATRA for its portion of the CAISO-controlled grid. This assessment is designed to:

- Evaluate the performance of the SCE transmission system under peak and off-peak conditions for near-term and long-term planning horizons.
- Determine transmission constraints under stressed system conditions.
- Identify upgrades needed to maintain the reliability of the transmission system and comply with NERC Reliability Standards, WECC Regional Business Practice, CAISO Planning Standards, and SCE's transmission planning criteria.

SCE's ATRA is performed in parallel with the CAISO TPP under the CAISO's FERC jurisdictional tariff. SCE's Grid Reliability Projects are identified in the CAISO TPP and subject to review and approval by the CAISO Board of Directors and cost recovery based upon the CAISO Transmission Access Charge (TAC).

The proposed operating date for the specific project is June 2022 and total ISO related direct capital expenditures that are projected to go into rate base during this period are $20.223 million.

29. Moorpark-Pardee 230 kV No.4 Circuit (PIN: 8104)

This project addresses a generation capacity deficiency that can cause a voltage collapse in the Moorpark local capacity subarea. The project involves stringing a fourth Moorpark-Pardee 230 kV circuit approximately 26 miles on existing structures in SCE's transmission right-of-way. This includes installing terminal equipment at Moorpark and Pardee Substations and relocating existing circuit terminations in the 230 kV switchrack at Moorpark Substation.

The projected operating date for the project is April 2022 with an estimated total project cost of $73.4 million, which includes both non-jurisdictional cost and jurisdictional costs beyond the forecast period. The estimated ISO-related direct capital expenditures of $52.811 million are projected to go into rate base in the period January 2021 through December 2022.

30. Red Bluff 2nd 500/230 kV AA Bank (Deliverability Network Upgrade) (PIN: 8163)

Proposed project scope will include installation of a second 500/230 kV 'AA' transformer bank at Red Bluff Substation. This will also require the need to modify the existing Special Protection System (SPS) to trip generation under an N-1 of one transformer bank. Upgrade was identified in the Q643AE/TOT486 executed Generator Interconnection Agreement (GIA) for full deliverability of Desert Harvest's 150 MW solar photovoltaic renewable generation.

The proposed operating date is November 2021 with an estimated total project cost of $19.1 million in direct capital expenditures, which includes jurisdictional cost beyond the forecast period. The estimated ISO-related direct capital expenditures that are projected to go into rate base during this period are $14.489 million.

31. Colorado River Substation Expansion – Installation of the 2nd AA 1120MVA 500/230 kV transformer bank (PIN: 8169)

The FERC conditionally accepted on February 4, 2011, the "Standard Large Generator Interconnection Agreement (LGIA) Among Palo Verde Solar II, LLC and Southern California Edison Company and California Independent System Operator Corporation" for interconnection of a 1,000 MW solar thermal generating facility to SCE's transmission system at the proposed Colorado River 230 kV Substation.

Colorado River expansion will provide capacity for up to 2,000 MW of new generation resources at Colorado River. The expansion will include both reliability network upgrades and delivery network upgrades. Colorado River was originally proposed to be configured as a 500-kV switchyard as a component of Devers-Palo Verde 2 (DPV2) and designed to be expanded as additional resources requested interconnection to the substation. Additional renewable generation projects have requested interconnection to the Colorado River 500 kV switchyard, including solar generation projects in the CAISO's transition cluster and additional interconnection requests for solar generation in subsequent queue clusters. Consequently, Colorado River needs to be expanded to accommodate such requests. The CPUC has previously approved Colorado River, however, the proposed expansion will require enlargement of the previously approved project's footprint and will include installation of a second 500/230 kV 'AA' transformer bank at Colorado River Substation. Upgrade was initially identified in Q294/TOT276 executed GIA.

The proposed operating date is December 2021 with an estimated total project cost of $19.6 million in direct capital expenditures, which includes both non-jurisdictional cost such as IT-Telecomm and jurisdictional cost beyond the forecast period. The estimated ISO-related direct capital expenditures that are projected to be placed in service during this period are $14.994 million.

For further details such as monthly budgeted direct expenditures, please see the following work papers: “WP-Schedule 10-Summary of ISO Capital Expenditures – Incentive Projects”, “WP-Schedule 16-Summary of ISO Capital Expenditures - Non-Incentive Projects”, and “WP-Schedule 10 & 16.”

SUMMARY OF ISO CAPITAL EXPENDITURES
NON-INCENTIVE PROJECTS

WORKPAPERS

Summary of ISO Capital Expenditure Forecast - Non-Incentive Projects

($000)

PIN	Project Title	C-WBS	Order #	High/ Low Voltage	OD	Project Total (ISO & non-ISO) Prior	2021	2022	Total	ISO Portion Prior	2021	2022	Total
Non-Incentive Transmission Projects include Direct Installation and Removal Expenditures, but exclude any C-WBS or Order # with 0% ISO.													
Other Transmission													
07861	Colorado River (NU): Terminate the Centipede-Coloardo River 220kV T/L at Colorado River Sub	CET-ET-TP-RN-786100	901713069	High	**Jul-22**	29	1,000	25	**1,054**	29	1,000	25	**1,054**
	Total Other Transmission					**29**	**1,000**	**25**	**1,054**	**29**	**1,000**	**25**	**1,054**
08088	Eldorado Substation (NU): Install facilities for a new 500 kV switchrack position to terminate the Eld	CET-ET-LG-AF-808800	902245555	High	**Apr-21**	-	75	-	75	-	75	-	75
08088	Harry Allen - Eldorado T/L: Install one span from the SCE dead end rack to the Connecting Last Adc	CET-ET-AF-CF-808800	902245556	High	**Aug-20**	521	1	-	522	521	1	-	522
08088	**Harry Allen - Eldorado 500kV Transmission Line Project**					**521**	**76**	**-**	**597**	**521**	**76**	**-**	**597**
	Total Added Facilities					**521**	**76**	**-**	**597**	**521**	**76**	**-**	**597**
TSP Projects													
05383	Chino 220/66kV - Add a 4th 280MVA, 220/66kV Transformer Bank and Split the Chino 66kV System	CET-ET-LG-TS-538303	901191112	High	**Sep-20**	-	35	-	**35**	-	12	-	**12**
07767	Johanna Substation: Equip New 220kV position with one 220kV Circuit Breaker and two 220kV Disc	CET-ET-LG-TS-776700	901487156	High	**Jul-20**	-	297	-	**297**	-	15	-	**15**
	Total TSP Projects					**-**	**332**	**-**	**332**	**-**	**27**	**-**	**27**
Transmission Project Reliability													
07547	Eldorado-Mohave 500kV: Remove two existing transmission structures. Install three new transmissi	CET-ET-TP-RL-754701	901107560	High	**Apr-20**	-	230	230	460	-	230	230	460
07727	Inyokern Substation: Expand existing MEER at Inyokern Substation.	CET-ET-TP-RL-772700	901394462	Low	**Jul-21**	96	100	-	195	35	37	-	72
07727	Control Substation: Install 12 N60 relays, one satellite clock, and two ethernet switches	CET-ET-TP-RL-772701	901394533	Low	**Dec-21**	430	328	-	758	370	282	-	652
07727	**Total Digital 395 Project: North-of-Kramer Area Telecom Network and RAS Upgrades**					**526**	**428**	**-**	**953**	**405**	**319**	**-**	**724**
07763	Eldorado-Lugo 500 kV line: CA side - Install 85 miles of new OPGW between CA/NV border and Pis	CET-ET-TP-RN-776304	901665563	High	**Jul-22**	6,471	1,000	4,174	11,645	6,471	1,000	4,174	11,645
07763	Eldorado-Lugo 500 kV line: NV Side -Install 2 miles of new OPGW between CA/NV border and MI5	CET-ET-TP-RN-776305	901665564	High	**Jul-22**	504	15	60	579	504	15	60	579
07763	Mohave: Install two Relays and two Switches	CET-ET-TP-RN-776302	901484315	High	**Jul-21**	154	5	100	259	154	5	100	259
07763	Lugo Sub: Install new control cables	CET-ET-TP-RN-776307	902249120	High	**Jan-22**	22	1	45	68	22	1	45	68
07763	Eldorado: Install equipment to support N-2	CET-ET-TP-RN-776308	902249121	High	**Mar-22**	43	3	45	**91**	43	3	45	**91**

SCHEDULE 20

A&G

WORKPAPERS

Total of all A&G Exclusions in Formula Input Format ("Shareholder + Other" and Incentive Compensation)

The following matrix presents the exclusions to be entered into the Schedule 20 exclusions matrix and associated notes.
Presented in same format as Schedule 20.
See "Shareholder and Other" and "Incentives" worksheets for contributions to these exclusions.

Note 1: Itemization of exclusions

Line	Acct.	Total Amount Excluded (Sum of C1 to C4)	Col 1 Shareholder Exclusions or Other Adjustments	Col 2 Franchise Requirements	Col 3 NOIC	Col 4 PBOPs	Source of Yellow-shaded Inputs
24	920	$265,731,764	$43,427,227		$222,304,538		Sum of "Shareholder and Other" and Incentives sheets

35	930.2	$36,338,171	$36,338,171		$0		Sum of "Shareholder and Other" and Incentives sheets
36	931	$0	$0		$0		Sum of "Shareholder and Other" and Incentives sheets
37	935	$1,049,723	$1,049,723		$0		Sum of "Shareholder and Other" and Incentives sheets

Note 2: Non-Officer Incentive Compensation ("NOIC") Adjustment

Adjust NOIC by excluding accrued NOIC Amount and replacing with the actual non-capitalized A&G NOIC payout.

		Amount	Source	Source of Yellow-shaded Inputs
a	Accrued NOIC Amount:	$216,604,107	SCE Records	Incentives Worksheet, Section 1
b	Actual A&G NOIC payout:	-$5,700,430	Note 2, d	
c	Adjustment:	$222,304,538		

Actual non-capitalized NOIC Payouts:

	Department	Amount	Source	Source of Yellow-shaded Inputs
d	A&G	-$5,700,430	SCE Records and Workpapers	Incentives Worksheet, Section 2
e	Other	-$2,569,165	SCE Records and Workpapers	Incentives Worksheet, Section 2
f	TDBU	-$9,126,424	SCE Records and Workpapers	Incentives Worksheet, Section 2
g	Total:	-$17,396,019	Sum of d to f	

Note 3: PBOPs Exclusion Calculation

		Amount	Note:	Source of Yellow-shaded Inputs
a	Current Authorized PBOPs expense amount:	$0	See instruction #4	
b	Prior Year Authorized PBOPs Expense Amount:	$6,329,000	Authorized PBOPs Expense Amount during Prior Year	Authorized PBOPs Expense Amount during Prior Year
c	Prior Year FF1 PBOPs expense:	$0	SCE Records	SCE Records
d	PBOPs Expense Exclusion:	-$6,329,000	c - b	

A&G "Shareholder or Other Exclusions" workpapers

1) Shareholder Exclusions for A&G Accounts 920-935:

Line	Account	Shareholder Exclusion	Notes:
1a	920	$1,661,623	See ShareholderExclusions tab for detail
1b	921	$515,540	See ShareholderExclusions tab for detail
1c	923	$2,095,119	See ShareholderExclusions tab for detail

1e	926	$1,905,440	See ShareholderExclusions tab for detail
1f	928	$409,611	See ShareholderExclusions tab for detail
1g	930.2	$9,349,793	See ShareholderExclusions tab for detail
	Total Shareholder:	$355,865,138	

2) Other Exclusions for A&G Accounts 920-935:

The following additional items have been determined to be not appropriate for inclusion in transmission rates, and therefore have been excluded as "Other Exclusions" in Note 1 to Schedule 20, Column 1.

Line	Account	Other Exclusions	Item
2a	920	$397,536	Generation, Hydro, Nuclear, Solar, and SSID 100% CPUC costs
2b	920	$271,933	Affiliate Charges
2c	920	$12,164,255	Grid Safety and Resiliency Program Balancing Account (GSRPBA)
2d	920	$9,624,784	Customer Service Re-Platform Memo Account (CSRPMA)
2e	920	$4,806,255	Fire Risk Mitigation Memo Account (FRMMA)
2f	920	$1,898,446	California Consumer Privacy Act Memorandum Account (CCPAMA)
2g	920	$3,428,079	Catastrophic Event Memo Account (CEMA)
2h	920	$13,201,624	Catastrophic Event Memo Account - COVID19 (CEMA-COVID19)
2i	920	$4,094,809	Wildfire Mitigation Plan Memo Account (WMPMA)
2j	921	-$241,041	SSID 100% CPUC costs
2k	923	$239,912	Fire Risk Mitigation Memo Account (FRMMA)
2l	923	$214,038	Avoided Cost Calculator Memo Account (ACCMA)
2m	923	$686,524	Catastrophic Event Memo Account (CEMA)
2n	923	$2,846,038	Catastrophic Event Memo Account - COVID19 (CEMA-COVID19)
2o	923	$535,141	Grid Safety and Resiliency Program Balancing Account (GSRPBA)
2p	923	$546,659	Intergrated Resource Planning Costs Memo Account (IRPCMA)
2q	925	$206,010	Nuclear General Functions and SONGS Settlement Costs
2r	925	$25,225,000	2020 Wildfire Reserve subject to cash treatment
2s	925	-$1,823,972	Base Revenue Requirement Balancing Account (BRRBA) Generation
2t	925	$1,260,864	FERC Audit Refund - Compromised Settlements
2u	926	$4,063,409	Generation, Nuclear and Hydro 100% CPUC costs
2v	926	$1,506,728	Catastrophic Event Memo Account - COVID19 (CEMA-COVID19)
2w	928	$5,148,642	Energy Resource Recovery Account (ERRA)
2x	928	$4,492,516	Public Purpose Programs Adjustment Mechanism (PPPAM)
2y	928	$836,727	Litigation Cost Tracking Account (LCTA)
2z	930.1	$3,834,724	Fire Risk Mitigation Memo Account (FRMMA)
2aa	930.1	$242,000	Catastrophic Event Memo Account (CEMA)
2bb	930.1	$1,712,804	Catastrophic Event Memo Account - COVID19 (CEMA-COVID19)
2cc	930.1	$2,023,561	Wildfire Mitigation Plan Memo Account (WMPMA)
2dd	930.2	-$10,682	Accounting Suspense
2ee	930.2	$99,196	Provision for Doubtful Accounts - Non-Shareholder Related
2ff	930.2	$10,569,174	Electric Program Investment Charge balancing acct. (EPICBA)
2gg	930.2	$13,851,524	Nuclear - PV
2hh	930.2	$2,479,167	COVID19 Pandemic Protections Memo Account (CPPMA)
2ii	935	$362,578	Catastrophic Event Memo Account - COVID19 (CEMA-COVID19)
2jj	935	$151,047	Wildfire Mitigation Plan Memo Account (WMPMA)
2kk	935	$536,098	SSID 100% CPUC costs
	Total Other:	$131,482,111	

3) Order 668 Amount Transferred from O&M Accounts 569.

This amount of costs is transferred from O&M accounts 569.100, 569.200, and 569.300:

Transfer to A&G account 920: $36,711,547

4) Total "Shareholder and Other" Input Exclusions for Column 1, Lines 24-37 of Schedule 20

(In Formula Input Format)

Line #	Acct.	Col 1 Shareholder or Other Exclusions	Calculation
24	920	$14,837,799	Line 1a + (2a to 2i) - 3
25	921	$274,499	Line 1b + 2j
26	922		
27	923	$7,163,432	Line 1c + (2k to 2p)
28	924		
29	925	$364,795,914	Line 1d + (2q to 2t)
30	926	$7,475,577	Line 1e + (2u to 2v)
31	927		
32	928	$10,887,497	Line 1f + (2w to 2y)
33	929		
34	930.1	$7,813,090	Line 2z to 2cc
35	930.2	$36,338,171	Line 1g + (2dd to 2hh)
36	931		
37	935	$1,049,723	Line 2ii to 2kk
Total All "Shareholder or Other":		$450,635,702	

A&G Incentive Compensation Adjustments Calculations

A) A&G Non-Officer Incentive Compensation (NOIC) Adjustments

(NOIC includes Short-Term Incentive Plan, Augmented Bonus, and Non-Officer Executive Incentive Compensation, as well as any plans which replace these).

1) Calculation of capitalized portion of NOIC costs in Account 920:

Line	Item	Amount	Source or Calculation	
1	Accrued NOIC	$216,604,107	Included in Account 920	
2	Capitalization rate	45.5%	CPUC GRC Decision for Test Year	2018
3	Capitalized NOIC	$98,554,869	L1 * L2	

2) Calculation of NOIC Payouts:

Line	Item	Amount	Source or Calculation
1	Actual NOIC Payout	$184,084,158	Section 2, L7
2	Authorized NOIC Payout	$81,158,850	Incentv Comp, Line 1, Col. D
3	NOIC Payout To Be Recovered	$81,158,850	Lesser of Line 1 or Line 2

	Business Unit	Actual Payout	% of Total Payout	NOIC Payout To Be Recovered	Allocated Capitalized NOIC	Non-Capitalized NOIC
		A	B = Col A / L7	C = Section 2, L3 * B	D = Section 1, L3 * B	E = C - D
4	A&G	$60,321,784	33%	$26,594,611	$32,295,041	-$5,700,430
5	Other	$27,186,830	15%	$11,986,104	$14,555,269	-$2,569,165
6	Trans. And Dist. Business Unit	$96,575,545	52%	$42,578,135	$51,704,559	-$9,126,424
7	Totals	$184,084,158	100%	$81,158,850	$98,554,869	-$17,396,019

Instruction for Lines 4-6, Column A: "Actual Payout" amount is to be the actual amount paid out in the Prior Year.

Actual non-capitalized NOIC Payouts

(In Formula Input Format for input to Schedule 20, Note 2)

	Department	Amount	Source
d	A&G	-$5,700,430	Line 4, column E above
e	Other	-$2,569,165	Line 5, column E above
f	Trans. And Dist. Business Unit	-$9,126,424	Line 6, column E above
	Total:	-$17,396,019	

B) A&G Officer Executive Incentive Compensation (OEIC) Adjustments

3) Calculation of capitalized portion of OEIC costs in Account 920:

Line	Item	Amount	Source or Calculation	
1	Accrued OEIC	$13,056,808	Included in Account 920.	
2	Capitalization rate	45.5%	CPUC GRC Decision for test year:	2018
3	Capitalized OEIC	$5,940,848	L1 * L2	

4) Calculation of OEIC Payouts:

Line	Item	Amount	Source or Calculation
1	Actual OEIC Payout	$3,467,015	Section 4, L4
2	Authorized OEIC Payout	$15,435,034	Incentive Caps, Line 2, Col. D
3	OEIC Payout To Be Recovered	$3,467,015	Lesser of Line 1 or Line 2

	Business Unit	Actual Payout	% of Total Payout	OEIC Payout To Be Recovered	Allocated Capitalized OEIC	Non-Capitalized OEIC
		A	B	C = Section 4, L3 * B	D = Section 3, L3 * B	E = C - D
4	A&G	$3,467,015	100%	$3,467,015	$5,940,848	-$2,473,833

Instruction for Line 4: "Actual Payout" amount is to be the actual amount paid out in the Prior Year.

5) Calculation of capitalized portion of SERP costs in Account 926:

Line	Item	Amount	Source or Calculation	
1	Accrued SERP	$13,200,461	Included in Account 926.	
2	Capitalization rate	45.5%	CPUC GRC Decision for test year:	2018
3	Capitalized SERP	$6,006,210	L1 * L2	
4	Actual SERP Payout	$13,200,461	Section 5, L1	
5	Authorized SERP	$10,752,222	Incentive Caps, Line 3, Col. D	
6	SERP Payout To Be Recovered	$10,752,222	Lesser of Line 1 or Line 2	

	Business Unit	Actual Payout	% of Total Payout	SERP Payout To Be Recovered	Allocated Capitalized SERP	Non-Capitalized SERP
		A	B	C = Section 5, L6 * B	D = Section 5, L3 * B	E = D - C
7	A&G	$13,200,461	100%	$10,752,222	$6,006,210	$4,746,012

C) A&G Long Term Incentive Compensation (LTI) Adjustments

6)

Line	Item	Amount	Source or Calculation
1	Accrued LTI Payout	$13,058,787	Included in Account 920.
2	Authorized LTI Payout	$0	Exclude 100%.
3	LTI Payout To Be Recovered	$0	Lesser of Line 1 or Line 2

Note: LTI is not capitalized.

D) A&G Summary of Incentive Compensation Adjustment Calculations

7) Adjustments to Account 920:

Line	Item	Amount	Source
1	Deduct Accrued OEIC	$13,056,808	Section 3, L1 Section 4, L4, Col E
2	Add Non-Capitalized OEIC	$2,473,833	
3	Deduct Accrued LTI	$13,058,787	Section 6, L1
4	Total	$28,589,428	

8) Adjustments to Account 922:

Line	Item	Amount	Source
1	Deduct Capitalized NOIC	$98,554,869	Section 1, L3
2	Deduct Capitalized OEIC	$5,940,848	Section 3, L3
3	Deduct Capitalized SERP	$6,006,210	Section 5, L3
4	Total	$110,501,927	

9) Adjustments to Account 926:

Line	Item	Amount	Source
1	Add Non-Capitalized SERP	-$4,746,012	Section 5, L4, Col C - Section 5, L4, Col D
2	Exclude Accrued SERP	$13,200,461	Section 5, L1
3	Total	$8,454,449	

E) Total All A&G Incentive Compensation Adjustments

10) Total Incentive Compensation Input Adjustments for Columns 1 and 3, Lines 24-37 of Schedule 20

(In Formula Input Format)

Line	**Incentive Type**	**Caps per GRC for 2018**	**Escalation Factor**	**Years of Escalation**	**Escalated Cap for Prior Year**	**Actual $ Paid in Prior Year**
1	NOIC	$76,500,000	3%	2	$81,158,850	$184,084,158
2	OEIC	$14,549,000	3%	2	$15,435,034	$3,467,015
3	SERP	$10,135,000	3%	2	$10,752,222	$13,200,461

Shareholder Exclusions in November 2021 Annual Update

Schedule 20, Lines 24-37, Column 1 for the following accounts:

Account	Amount	Title	Description
920	$85,089	LAM Shareholder Licensing Activities-Eastern	Includes labor and other expenses associated with real estate licensing and leasing activities performed by Real Properties personnel for shareholder funded activities.
920	$879,104	LAM Shareholder Licensing Activities-Metro	Includes labor and other expenses associated with real estate licensing and leasing activities performed by Real Properties personnel for shareholder funded activities.
920	$279,948	LAM Shareholder Licensing Activities-Northern	Includes labor and other expenses associated with real estate licensing and leasing activities performed by Real Properties personnel for shareholder funded activities.
920	$13,947	LAM Shareholder Licensing Activities-Southern	Includes labor and other expenses associated with real estate licensing and leasing activities performed by Real Properties personnel for shareholder funded activities.
920	$28,892	Shareholder Licensing and Land Services	Includes costs incurred by Real Properties for shareholder funded activities.
920	$374,643	AB560 Shareholder	Includes labor and other expenses for shareholder funded activities related to AB560.
Total 920:	$1,661,623		

Account	Amount	Title	Description
921	$1,645	Audit Services	Includes labor and other expenses by Audit Services for shareholder funded activities.
921	$35,708	LAM Shareholder Licensing Activities-Eastern	Includes labor and other expenses associated with real estate licensing and leasing activities performed by Real Properties personnel for shareholder funded activities.
921	$73,013	LAM Shareholder Licensing Activities-Northern	Includes labor and other expenses associated with real estate licensing and leasing activities performed by Real Properties personnel for shareholder funded activities.
921	$341,659	LAM Shareholder Licensing Activities-Metro	Includes labor and other expenses associated with real estate licensing and leasing activities performed by Real Properties personnel for shareholder funded activities.
921	-$1,356	LAM Shareholder Licensing Activities-Southern	Includes labor and other expenses associated with real estate licensing and leasing activities performed by Real Properties personnel for shareholder funded activities.
921	$29,069	Shareholder Licensing and Land Services	Includes costs incurred by Real Properties for shareholder funded activities.
921	$35,802	AB560 Shareholder	Includes labor and other expenses for shareholder funded activities related to AB560.
Total 921:	$515,540		

Account	Amount	Title	Description
923	$2,004,400	EIX Costs	Removes certain EIX costs not recoverable from ratepayers
923	$90,719	Outside Services	Removes shareholder outside services costs
Total 923:	$2,095,119		

Account	Amount	Title	Description
925	$336,428,012	Injuries & Damages - Shareholder	Removes shareholder cost related to injuries and damages
925	$3,500,000	Miscellaneous Shareholder	Removes shareholder cost related to injuries and damages
Total 925:	$339,928,012		

Account	Amount	Title	Description
926	$376,076	Fitness Center Expenses	Includes labor and non-labor costs supporting the Company Fitness Center, as well as removes a credit associated with dues paid by members.
926	$522,988	Service Awards	Includes company expenses related to anniversary awards, service pins, and other costs incurred in connection with employee welfare activities not otherwise included in a specific final cost center.
926	$17,249	Diamond Club	Company cost to support quarterly meetings for retiree and employees with 25+ years of service.
926	$7,121	Humanitarian Award Program	Company cost to provide recognition of employees who provided a life saving action.
926	$160,071	Miscellaneous	Includes adjusting entries and miscellaneous corrections.
926	$821,937	Executive Benefits Adjustment	Removes executive benefit credits not related to Executive Retirement Plan
Total 926:	$1,905,440		

Account	Amount	Title	Description
928	$409,611	SONGS Outside Services Costs	Removes costs associated with outside services related to San Onofre Generating Station
Total 928:	$409,611		

Account	Amount	Title	Description
930.2	$699,688	General Function - Controllers	Miscellaneous Controllers Department General Function
930.2	-$2,702	General Function - EMS	Miscellaneous EMS Department General Function
930.2	$1,652,807	Miscellaneous General Expenses - Shareholder	Miscellaneous Public Affairs Corporate Shareholder Dues and Memberships
930.2	$7,000,000	Provisions for Doubtful Accounts - Shareholder	Shareholded related - Provision for Doubtful Accounts-Non Energy Billings
Total 930.2:	$9,349,793		

Total All $355,865,138

Notes:

1) Definitions:

Facility Cost - Principal: Total payments made by SCE on the Facility

Facility Cost - Interest: Total payments made by SCE on post-construction interest (quarterly) for Facility Costs. Interest calculations begin on the in-service date of the Facility.

One-Time Cost - Principal: Total payments made by SCE on One-Time Costs

One-Time Cost - Interest: Total payments made by SCE on pre- and post-construction interest (accrued interest and quarterly interest, respectively) for One-Time Costs. Interest calculations begin upon receipt of payment from the customer.

2) When actual costs are determined (True Up), refund amounts are recalculated to reflect the new totals. Adjustments are made for principal and accrued interest refunds for prior quarters to align the refund totals to the 1/20th per quarter criteria.

FFU

WORKPAPERS

Calculation of 2020 Updated Uncollectible Factor

Line	Item	Source		Amount
1	Total 2020 Revenue with FF&U	Source: FF1, page 300, Line 10	$	11,671,161,445
2	CPUC GRC Uncollectible Factor	Source: CPUC GRC D19-05-020		0.2110%
3	Uncollectible Expense Reflected in Total 2020 Revenue	Line 1 multiplied by Line 2	$	24,626,151
4	Total 2020 Revenue without Uncollectible Expense Collected	Line 1 less Line 3	$	11,646,535,294
5	CPUC Approved Total Company 2020 Uncollectibles	AL 4377-E-A, Table 6, Line 6	$	155,300,000
5a	Adjustment to Line 5	See Note 2	$	23,652,311
5b	Adjusted Total Company 2020 Uncollectibles	Line 5 less Line 5a	$	131,647,689
6	Total 2020 Revenue with FF and Updated Uncollectible Expense	Line 4 plus Line 5b	$	11,778,182,983
7	Updated Uncollectible Factor	Line 5b divided by Line 6		1.1177%

Calculation of Formula Franchise Fee and Uncollectibles Factors

Line			Reference
8	CPUC Franchise Fee Factor (% of Total Revenue Requirement)	0.9144%	CPUC GRC Decision D19-05-020, Appendix C, page C-7, line 6
9	Uncollectibles Factor (% of Total Revenue Requirement)	1.1177%	Line 7
			Calculation
10	Formula Franchise Fee Factor (see Note 1)	0.9248%	Line 8 / (1 - (Line 8 + Line 2))
11	Formula Uncollectibles Factor (see Note 1)	1.1409%	Line 9 / (1 - (Line 8 + Line 9))

Notes:

1 The formula Franchise Fee and Uncollectibles Factors are applied to the Base TRR not including FF&U expenses.
The CPUC adopted FF&U Factors are percentages of total revenue requirements including FF&U expenses.
The calculation on Lines 10 and 11 converts the CPUC adopted FF&U factors to FF&U factors appropriate
for application to total revenue requirement not including FF&U expenses, as used in the formula transmission rate.

2 Line 5a is used to reduce Line 5 if appropriate. Entry examples include any state or federal funds that reduce the uncollectables required by FERC customers.

Notes:

1) Includes any Unfunded Reserves relating to accrued expenses included in Account 925 “Injuries and Damages”, reduced for any expected offsetting payments.

2) No Unfunded Reserve shall be included in Schedule 34 associated with any wildfire other than the 2017/18 Wildfire/Mudslide Events. Associated costs for other wildfire events are reflected in Schedule 20 "A&G" and recovered on a cash basis (see Instruction 6 of Schedule 20).
